Professional Summary

Senior DevOps and platform engineer who standardizes CI/CD and infrastructure practice across large, heterogeneous organizations — at Énergir, drove adoption across 12 application teams outside any reporting line, running recurring enablement sessions that turned delivered tooling into real usage and building the cross-organizational stakeholder credibility that comes with it. Deep Microsoft Azure, Terraform, and Kubernetes practice in regulated sectors (energy, financial services), with real private-cloud VMware exposure from earlier infrastructure work.

Core Expertise

Platform Engineering & Enablement	CI/CD standardization across heterogeneous stacks, pipeline-as-code, cross-team enablement without reporting authority, mentoring
Infrastructure & Cloud Automation	Microsoft Azure, Terraform, Ansible, Kubernetes, Docker, ArgoCD, VMware vSphere
CI/CD & Artifact Management	Azure DevOps, GitHub Actions, Jenkins, JFrog Artifactory, Nexus
Reliability & Production Engineering	Root cause analysis, MTTR reduction, incident response, automated remediation
Programming & Systems	Python, FastAPI, Bash, C++, Java, SQL, NoSQL, Red Hat Linux

Work Experience

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – Present

- Owned CI/CD standardization for 12 application teams and 70+ applications across nine distinct runtimes — Java, Node.js, Python, Spark, Oracle, CloudFoundry, MuleSoft, Salesforce, and Databricks — entering most of those ecosystems with no prior experience.
- Drove CI/CD and platform-engineering adoption across 12 teams outside any reporting line, running recurring enablement sessions (~6/year) with each application team after pipeline delivery — turning delivered tooling into actual usage rather than shelfware.
- Led cloud modernization migrating 5–10 mission-critical services to Microsoft Azure with Terraform/Ansible IaC to eliminate configuration drift.

Key technologies: Microsoft Azure, Azure DevOps, GitHub Actions, Terraform, Ansible, Java, Node.js, Python, IaC

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026 — *concurrent engagement, delivered alongside the Énergir role*

- Automated provisioning of on-demand Artifactory instances using Kubernetes and ArgoCD, letting administrators spin up fully configured environments for safe testing.
- Delivered a 6-month engagement hardening the enterprise JFrog Artifactory platform, building a Python/FastAPI service that tested ~250 remote repositories every 4 hours, publishing to Dynatrace.

Key technologies: JFrog Artifactory, Kubernetes, ArgoCD, Python, FastAPI, GitHub Actions, Dynatrace, Docker, Helm

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Centralized Jenkins Pipeline as Code across a team of 10–15 developers maintaining 80+ applications for 20+ clients, standardizing pipeline steps across tech stacks.
- Automated OS-level patching across 600+ servers, fleet configuration driven declaratively through Puppet and Spacewalk.

- Conceived and built, unprompted, a software inventory platform surfacing CVE exposure and SSL/TLS certificate scoring to product owners.

Key technologies: Jenkins, ELK Stack, Bash, Linux, Puppet, Spacewalk, AWS (EC2, S3, Route 53, VPC)

SOVO Technologies — Lead Technician → Software Engineer

Montréal, QC | November 2008 – December 2017

- Owned all company IT infrastructure — including a zero-downtime server relocation and a redundant architecture that eliminated single points of failure — while managing a team of technicians.
- Wrote production software alongside infrastructure work for roughly seven years before the title formalized it.

Key technologies: C++, Java, SQL, Windows Server, Linux, Active Directory, **VMware vSphere**, Cisco routing, firewall/VPN

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure (ÉTS), Montréal, QC | 2005 – 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal, QC | 2002 – 2005
