Professional Summary

Senior DevOps engineer who takes ownership of production systems other people are hesitant to touch — learns them cold under a delivery deadline, then replaces manual and fragile processes with automation that holds. Given a narrow scope three times, at three employers, over eight years — and each time delivered something structurally larger than what was asked: an unprompted fleet-wide security-visibility platform at Tink, a Salesforce CLI migration at Énergir, and a JFrog validation harness at Desjardins that ended up de-risking the platform's own version upgrade. Deep Microsoft Azure, Terraform, Kubernetes, and observability practice in regulated sectors (energy, financial services), with current, disciplined AI-assisted engineering practice built into daily work.

Core Expertise

Reliability & Production Engineering	Root cause analysis, MTTR reduction, proactive monitoring & alerting, incident response, automated remediation, 24/7 on-call
AI-Assisted Engineering	Scoped/gated AI-assisted development, human-validation checkpoints, risk assessment of generated-code promotion
Infrastructure & Cloud Automation	Microsoft Azure, Terraform, Ansible, Kubernetes, Docker, ArgoCD
Platform Engineering & Enablement	CI/CD standardization across heterogeneous stacks, pipeline-as-code, cross-team enablement without reporting authority
CI/CD & Artifact Management	Azure DevOps, GitHub Actions, Jenkins, JFrog Artifactory, Nexus
Programming & Systems	Python, FastAPI, Bash, C++, Java, SQL, NoSQL, Red Hat Linux, Ubuntu

Work Experience

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – Present

- Drove root cause analysis on critical production incidents and built the proactive monitoring, dashboards, and automated remediation that reduced Mean Time to Recovery (MTTR) across the application estate.
- Introduced AI-assisted engineering practices over the past 6–9 months with researched scope gates and human-validation checkpoints before any AI-generated code ships — and flagged to leadership that the organization has no equivalent safeguards.
- Owned CI/CD standardization for 12 application teams and 70+ applications across nine distinct runtimes, entering most of those ecosystems with no prior experience.
- Led cloud modernization migrating 5–10 mission-critical services to Microsoft Azure with Terraform/Ansible IaC to eliminate configuration drift.

Key technologies: Microsoft Azure, Azure DevOps, GitHub Actions, Terraform, Ansible, Python, IaC

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026 — *concurrent engagement, delivered alongside the Énergir role*

- Automated provisioning of on-demand Artifactory instances using Kubernetes and ArgoCD, letting administrators spin up fully configured environments for safe testing — akin to self-service landing zones.
- Delivered a 6-month engagement hardening the enterprise JFrog Artifactory platform, building a Python/FastAPI service that tested the configuration of ~250 remote repositories every 4 hours, publishing to Dynatrace.
- Extended the engagement past its original scope by building the validation logic tool-agnostic and configurable; the same harness later de-risked the platform's own version upgrade.

Key technologies: JFrog Artifactory, Python, FastAPI, Kubernetes, ArgoCD, GitHub Actions, Dynatrace, Docker, Helm

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Conceived and built, unprompted, a software inventory platform cataloguing every application and version across a 600+ server fleet — surfacing CVE exposure, end-of-life software, and SSL/TLS certificate scoring directly to product owners.
- Drove down 24/7 on-call frequency via RCA and prevention — from roughly one page every 2 rotations to one every 4–5 by the end; built a self-healing response for an unstable Elasticsearch cluster.
- Centralized Jenkins Pipeline as Code across a team of 10–15 developers maintaining 80+ applications for 20+ clients.

Key technologies: Jenkins, ELK Stack, Bash, Linux, Puppet, Spacewalk, AWS (EC2, S3, Route 53, VPC)

SOVO Technologies — Lead Technician → Software Engineer

Montréal, QC | November 2008 – December 2017

- Owned all company IT infrastructure, including a zero-downtime server relocation and a redundant architecture eliminating single points of failure.
- Wrote production software alongside infrastructure work for roughly seven years before the title formalized it.

Key technologies: C++, Java, SQL, Windows Server, Linux, Active Directory, VMware vSphere

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure (ÉTS), Montréal, QC | 2005 – 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal, QC | 2002 – 2005
