Professional Summary

Senior DevOps engineer who learns unfamiliar platforms cold under a delivery deadline, then replaces manual and fragile processes with automation that holds — demonstrated independent project leadership, including an unprompted fleet-wide security-visibility platform built without being asked. Deep Terraform, Kubernetes, and CI/CD practice across cloud and on-premises environments, in regulated sectors (energy, financial services).

Core Expertise

Infrastructure & Cloud Automation	Microsoft Azure, AWS, Terraform, Ansible, Kubernetes, Docker, ArgoCD
Platform Engineering & Enablement	CI/CD standardization across heterogeneous stacks, pipeline-as-code, cross-team enablement without reporting authority
CI/CD & Artifact Management	Azure DevOps, GitHub Actions, Jenkins, JFrog Artifactory
Reliability & Production Engineering	Root cause analysis, MTTR reduction, incident response, automated remediation, 24/7 on-call
Programming & Systems	Python, FastAPI, Bash, C++, Java, SQL, NoSQL, Red Hat Linux

Work Experience

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Conceived and built, unprompted, a software inventory platform cataloguing every application and version across a 600+ server fleet — surfacing CVE exposure, end-of-life software, and SSL/TLS certificate scoring directly to product owners who until then had no visibility into the fleet's security or obsolescence risk.
- Built the compute, caching, and database layers of a client's AWS migration target environment — EC2, S3, Route 53, VPC, self-managed memcached, serverless database — with no prior AWS experience; the client cancelled before cutover.
- Automated OS-level patching across 600+ servers, fleet configuration driven declaratively through Puppet and Spacewalk.
- Centralized Jenkins Pipeline as Code across a team of 10–15 developers maintaining 80+ applications for 20+ clients.

Key technologies: AWS (EC2, S3, Route 53, VPC), Jenkins, ELK Stack, Bash, Linux, Puppet, CVE/vulnerability tracking

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – Present

- Led cloud modernization migrating 5–10 mission-critical services to Microsoft Azure, implementing Terraform and Ansible IaC practices that standardized environment provisioning and eliminated configuration drift.
- Drove root cause analysis on critical production incidents and built the proactive monitoring, dashboards, and automated remediation that reduced MTTR across the application estate.
- Owned CI/CD standardization for 12 application teams and 70+ applications across nine distinct runtimes.

Key technologies: Microsoft Azure, Terraform, Ansible, Azure DevOps, GitHub Actions, Python

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026 — *concurrent engagement, delivered alongside the Énergir role*

- Automated provisioning of on-demand Artifactory instances using Kubernetes and ArgoCD.
- Extended a 6-month engagement past its original scope by building validation logic tool-agnostic and configurable, so administrators could reuse it for their own cases.

Key technologies: Kubernetes, ArgoCD, JFrog Artifactory, Python, FastAPI, Dynatrace

SOVO Technologies — Lead Technician → Software Engineer

Montréal, QC | November 2008 – December 2017

- Owned all company IT infrastructure, including a zero-downtime server relocation and a redundant architecture eliminating single points of failure.
- Wrote production software alongside infrastructure work for roughly seven years before the title formalized it.

Key technologies: C++, Java, SQL, Windows Server, Linux, Active Directory, VMware vSphere

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure (ÉTS), Montréal, QC | 2005 – 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal, QC | 2002 – 2005
