Professional Summary

Senior DevOps engineer who builds platforms with users, not scripts — internal developer tooling paired with enablement, so it gets real adoption rather than sitting unused. Introduced disciplined, scoped AI-assisted engineering practices into daily production work, with hard scope gates and human-validation checkpoints before any AI-generated code ships. Deep Kubernetes, ArgoCD/GitOps, and CI/CD practice built while standardizing delivery for 12 application teams.

Core Expertise

Platform Engineering & Enablement	CI/CD standardization across heterogeneous stacks, pipeline-as-code, internal developer tooling, cross-team enablement without reporting authority
AI-Assisted Engineering	Scoped/gated AI-assisted development, human-validation checkpoints, risk assessment of generated-code promotion
Infrastructure & Cloud Automation	Microsoft Azure, Terraform, Ansible, Kubernetes, Docker, ArgoCD
CI/CD & Artifact Management	Azure DevOps, GitHub Actions, Jenkins, JFrog Artifactory
Programming & Systems	Python, FastAPI, Bash, C++, Java, SQL, NoSQL, Red Hat Linux

Work Experience

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – Present

- Owned CI/CD standardization for 12 application teams and 70+ applications across nine distinct runtimes, entering most of those ecosystems with no prior experience.
- Drove CI/CD and platform-engineering adoption across 12 teams outside any reporting line, running recurring enablement sessions (~6/year) — turning delivered tooling into actual usage rather than shelfware.
- Introduced AI-assisted engineering practices over the past 6–9 months with researched scope gates and human-validation checkpoints before any AI-generated code ships.
- Led cloud modernization migrating 5–10 mission-critical services to Microsoft Azure with Terraform/Ansible IaC.

Key technologies: Microsoft Azure, Azure DevOps, GitHub Actions, Terraform, Ansible, Python

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026 — *concurrent engagement, delivered alongside the Énergir role*

- Automated provisioning of on-demand Artifactory instances using Kubernetes and ArgoCD, letting administrators spin up fully configured environments for safe testing.
- Delivered a 6-month engagement building a Python/FastAPI service that tested the configuration of ~250 remote repositories every 4 hours, publishing to Dynatrace — extending the engagement past scope by making the logic reusable.

Key technologies: Kubernetes, ArgoCD, JFrog Artifactory, Python, FastAPI, GitHub Actions, Dynatrace, Docker

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Conceived and built, unprompted, a software inventory platform cataloguing every application and version across a 600+ server fleet, surfacing CVE exposure and SSL/TLS certificate scoring to product owners.
- Centralized Jenkins Pipeline as Code across a team of 10–15 developers maintaining 80+ applications for 20+ clients.

Key technologies: Jenkins, ELK Stack, Bash, Linux, Puppet, AWS (EC2, S3, Route 53, VPC)

SOVO Technologies — Lead Technician → Software Engineer

Montréal, QC | November 2008 – December 2017

- Owned all company IT infrastructure, including a zero-downtime server relocation and a redundant architecture eliminating single points of failure.
- Wrote production software alongside infrastructure work for roughly seven years before the title formalized it.

Key technologies: C++, Java, SQL, Windows Server, Linux, Active Directory, VMware vSphere

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure (ÉTS), Montréal, QC | 2005 – 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal, QC | 2002 – 2005
