Professional Summary

Senior DevOps engineer with a track record of building security and governance directly into CI/CD pipelines and artifact management, rather than bolting it on after the fact. Takes ownership of production systems other people are hesitant to touch — learns them cold under a delivery deadline, then replaces manual and fragile processes with automation that holds. Deep Microsoft Azure, Terraform, and Kubernetes practice in regulated sectors (energy, financial services).

Core Expertise

CI/CD & Artifact Management	Azure DevOps, GitHub Actions, Jenkins, JFrog Artifactory, Nexus
Infrastructure & Cloud Automation	Microsoft Azure, Terraform, Ansible, Kubernetes, Docker, ArgoCD
Reliability & Production Engineering	Root cause analysis, MTTR reduction, incident response, automated remediation
Observability	Dynatrace, Splunk, ELK Stack (Elasticsearch, Logstash, Kibana)
Programming & Systems	Python, FastAPI, Bash, C++, Java, SQL, NoSQL, Red Hat Linux

Work Experience

Desjardins — Senior DevOps Engineer (*Contract*)

Montréal, QC (Remote) | October 2025 – March 2026 — *concurrent engagement, delivered alongside the Énergir role*

- Built Splunk alerting to detect manual configuration changes made outside the CI/CD pipeline, improving auditability and compliance.
- Implemented artifact lifecycle policies to enforce retention standards and reduce storage overhead across the enterprise JFrog Artifactory platform.
- Delivered a 6-month engagement building a Python/FastAPI service that tested the configuration of ~250 remote repositories every 4 hours, publishing to Dynatrace.
- Automated provisioning of on-demand Artifactory instances using Kubernetes and ArgoCD.

Key technologies: JFrog Artifactory, Splunk, Python, FastAPI, Kubernetes, ArgoCD, GitHub Actions, Dynatrace, Docker

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Conceived and built, unprompted, a software inventory platform cataloguing every application and version across a 600+ server fleet — surfacing CVE exposure, end-of-life software, and SSL/TLS certificate scoring directly to product owners who previously had no visibility into it.
- Centralized Jenkins Pipeline as Code across a team of 10–15 developers maintaining 80+ applications for 20+ clients.
- Automated OS-level patching across 600+ servers, fleet configuration driven declaratively through Puppet and Spacewalk.

Key technologies: Jenkins, ELK Stack, Bash, Linux, Puppet, CVE/vulnerability tracking, SSL/TLS scoring

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – Present

- Owned CI/CD standardization for 12 application teams and 70+ applications across nine distinct runtimes.
- Led cloud modernization migrating 5–10 mission-critical services to Microsoft Azure with Terraform/Ansible IaC.
- Drove root cause analysis on critical production incidents and built proactive monitoring and automated remediation that reduced MTTR.

Key technologies: Microsoft Azure, Azure DevOps, GitHub Actions, Terraform, Ansible, Python

SOVO Technologies — Lead Technician → Software Engineer

Montréal, QC | November 2008 – December 2017

- Owned all company IT infrastructure, including a zero-downtime server relocation and a redundant architecture eliminating single points of failure.
- Wrote production software alongside infrastructure work for roughly seven years before the title formalized it.

Key technologies: C++, Java, SQL, Windows Server, Linux, Active Directory, VMware vSphere

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure (ÉTS), Montréal, QC | 2005 – 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal, QC | 2002 – 2005
