Professional Summary

Senior platform and deployment engineer with 18 years of experience integrating, operating, and troubleshooting complex software in client and production environments. Combines Linux and network administration, Python and Bash automation, Docker and Kubernetes delivery, and hands-on incident response. At Énergir, standardized delivery for 70+ applications across 12 teams and nine runtimes while supporting mission-critical energy services. At Desjardins, built a continuous Python/FastAPI validation service for approximately 250 enterprise repositories and repeatable Kubernetes environments for safe testing. Earlier, owned infrastructure and production deployments across a 600-server fleet serving more than 20 clients. Known for learning unfamiliar systems quickly, diagnosing problems across application and infrastructure layers, and leaving clients with durable automation, documentation, and operational practices.

Technical Skills

Deployment and Integration	Client-environment discovery, application installation and configuration, CI/CD, release automation, environment validation, technical documentation
Systems and Networking	Red Hat Linux, Ubuntu, CentOS, Rocky Linux, Windows Server, TCP/IP, DNS, routing, firewalls, VPNs, load balancing, SSL/TLS
Automation and Development	Python, FastAPI, Bash, C++, Java, SQL, REST APIs, automated testing and remediation
Containers and Cloud	Docker, Kubernetes, Helm, ArgoCD, Microsoft Azure, Terraform, Ansible, AWS infrastructure
Reliability and Security	Incident response, root-cause analysis, 24/7 on-call, monitoring, alerting, CVE visibility, configuration compliance, backup and recovery
Observability and Delivery	Dynatrace, Splunk, ELK Stack, PRTG, Azure DevOps, GitHub Actions, Jenkins, JFrog Artifactory

Work Experience

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – Present

- Standardized CI/CD for 12 application teams and 70+ applications across nine runtimes, rapidly learning unfamiliar platforms and translating their deployment constraints into reliable, reusable automation.
- Led cloud modernization for 5–10 mission-critical services using Microsoft Azure and Terraform/Ansible, eliminating configuration drift and improving repeatability across environments.
- Drove root-cause analysis on critical production incidents and built monitoring, dashboards, and automated remediation to reduce recovery time across a regulated energy environment.
- Rebuilt Salesforce delivery with the supported CLI and a validation-sandbox gate, reducing missed deployment windows from a recurring problem to one since launch.
- Worked directly with application teams through recurring enablement sessions, documentation, troubleshooting, and post-delivery support to ensure successful adoption.

Key technologies: Microsoft Azure, Azure DevOps, GitHub Actions, Terraform, Ansible, Python, Linux, Java, Node.js, Databricks, ELK, ServiceNow

Desjardins — Senior DevOps Engineer Contract

Montréal, QC Remote | October 2025 – March 2026

- Designed and built a Python/FastAPI service that validated approximately 250 remote Artifactory repositories every four hours and published actionable operational signals to Dynatrace.
- Turned a narrow configuration-check mandate into a configurable, tool-agnostic validation harness that became the regression safety net for an enterprise platform upgrade.
- Automated on-demand Artifactory environments with Kubernetes and ArgoCD, enabling administrators to deploy fully configured instances for safe integration and upgrade testing.
- Built Splunk alerting for out-of-pipeline configuration changes and implemented artifact lifecycle policies, strengthening security, auditability, and operational control.

Key technologies: Python, FastAPI, Linux, JFrog Artifactory, Kubernetes, ArgoCD, GitHub Actions, Dynatrace, Splunk, Docker, Helm

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Operated and automated a 600+ server Linux estate supporting 80+ applications and more than 20 clients, troubleshooting across application, infrastructure, network, and database layers.
- Automated operating-system patching, including kernel-update reboots, reducing the process to a monthly verification check with near-zero downtime.
- Reduced 24/7 on-call frequency from roughly one page every two rotations to one every four or five through root-cause analysis, prevention, and self-healing automation.
- Centralized Jenkins Pipeline as Code across 10–15 developers and 80+ applications, standardizing deployment practices while improving release visibility.
- Built a fleet-wide inventory platform that exposed CVEs, end-of-life software, and SSL/TLS risk directly to product owners.
- Built core AWS migration infrastructure including compute, storage, DNS, networking, caching, and database layers after rapidly learning the target environment.

Key technologies: Linux, Bash, Jenkins, ELK Stack, Puppet, Spacewalk, PRTG, Jira, NetScaler, AWS EC2, S3, Route 53 and VPC

SOVO Technologies — Lead Technician to Software Engineer

Montréal, QC | November 2008 – December 2017

- Owned company infrastructure and customer-facing technical operations, including Linux and Windows servers, VMware, Cisco networking, firewalls, VPNs, backups, and recovery.
- Delivered a zero-downtime server relocation and introduced redundant infrastructure that eliminated core single points of failure.
- Managed and trained technicians, served as the final quality gate before releases, and diagnosed issues spanning software, systems, and networks.
- Developed production software including a scheduling platform, voice-recognition evaluation system, and multilingual dictionary infrastructure.

Key technologies: Linux, Windows Server, VMware vSphere, Cisco routing, firewalls, VPNs, C++, Java, SQL, Active Directory

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure, Montréal, QC | 2005 – 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal, QC | 2002 – 2005
