Professional Summary

Senior DevOps and platform engineer with 18 years of experience building the automation, environments, and operational practices behind reliable software delivery. Deep Microsoft Azure, Infrastructure as Code, CI/CD, and enterprise platform experience, including Azure DevOps, Terraform, Ansible, Kubernetes, ArgoCD, GitHub Actions, Jenkins, and JFrog Artifactory. At Énergir, standardized delivery for 70+ applications across 12 teams and led Azure modernization in a regulated energy environment. At Desjardins, automated Kubernetes-based Artifactory environments and built continuous validation for approximately 250 repositories. Combines hands-on delivery with technical leadership, mentoring, security-minded automation, and a record of improving systems beyond the initial assignment.

Technical Skills

Cloud and Infrastructure	Microsoft Azure, Terraform, Ansible, Puppet, VMware vSphere, Linux, Windows Server, AWS infrastructure
Containers and Platforms	Kubernetes, Docker, ArgoCD, Helm, JFrog Artifactory, CloudFoundry
CI/CD and Automation	Azure DevOps, GitHub Actions, Jenkins Pipeline as Code, Git, release automation, environment validation
Reliability and Security	Availability, incident response, root-cause analysis, automated remediation, configuration compliance, CVE visibility
Observability	Dynatrace, Splunk, ELK Stack, PRTG, dashboards, monitoring and alerting
Programming and Systems	Python, FastAPI, Bash, C++, Java, SQL, REST APIs, networking, firewalls and VPNs

Work Experience

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – Present

- Standardized CI/CD for 12 application teams and 70+ applications across nine runtimes, replacing manual and fragile processes with reusable pipelines and quality gates.
- Led Microsoft Azure modernization for 5–10 mission-critical services and standardized Terraform and Ansible Infrastructure as Code across environments to reduce configuration drift.
- Drove root-cause analysis on critical production incidents and implemented monitoring, dashboards, and automated remediation to improve availability and reduce recovery time.
- Rebuilt Salesforce delivery with the supported CLI and an automated validation-sandbox gate, reducing missed deployment windows from a recurring problem to one since launch.
- Led adoption without formal authority through recurring enablement sessions, technical guidance, documentation, and direct support for application teams.

Key technologies: Microsoft Azure, Azure DevOps, GitHub Actions, Terraform, Ansible, Python, Linux, Java, Node.js, Databricks, ELK, ServiceNow

Desjardins — Senior DevOps Engineer Contract

Montréal, QC Remote | October 2025 – March 2026

- Built a Python/FastAPI service that validated approximately 250 remote JFrog Artifactory repositories every four hours and published actionable health signals to Dynatrace.
- Extended the original configuration-check assignment into a configurable validation platform that became the regression safety net for an enterprise Artifactory upgrade.
- Automated on-demand Artifactory environments with Kubernetes and ArgoCD, giving administrators repeatable, fully configured platforms for safe integration and upgrade testing.
- Implemented lifecycle policies and Splunk alerts for configuration changes outside CI/CD, strengthening security, governance, and operational control.

Key technologies: JFrog Artifactory, Kubernetes, ArgoCD, Docker, Helm, Python, FastAPI, GitHub Actions, Dynatrace, Splunk, Linux

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Centralized Jenkins Pipeline as Code for 80+ applications serving more than 20 clients, improving deployment consistency and release visibility.
- Automated patching and kernel-update reboots across 600+ Linux servers using Puppet and Spacewalk, reducing the work to a monthly verification with near-zero downtime.
- Reduced 24/7 on-call frequency from roughly one page every two rotations to one every four or five through root-cause analysis, prevention, and self-healing automation.
- Built fleet-wide security visibility covering installed software, CVEs, end-of-life components, and SSL/TLS risk for product owners.
- Built compute, storage, DNS, networking, caching, and database components for an AWS migration target environment during a six-month initiative that was cancelled before production cutover.

Key technologies: Jenkins, Linux, Bash, Puppet, Spacewalk, ELK Stack, PRTG, Jira, NetScaler, AWS EC2, S3, Route 53 and VPC

SOVO Technologies — Lead Technician to Software Engineer

Montréal, QC | November 2008 – December 2017

- Owned company infrastructure, delivered a zero-downtime server relocation, and introduced redundancy that eliminated core single points of failure.
- Managed and trained technicians, served as the final quality gate before releases, and developed production software for scheduling and voice-recognition evaluation.

Key technologies: Linux, Windows Server, VMware vSphere, Cisco routing, firewalls, VPNs, Active Directory, C++, Java, SQL

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure, Montréal, QC | 2005 – 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal, QC | 2002 – 2005
