BeyondTrust Re: Staff Site Reliability Engineer- Remote

Dear BeyondTrust Hiring Team,

I'm applying for the Staff Site Reliability Engineer role supporting the Password Safe platform. At Desjardins, I was asked to verify Artifactory repository configuration — I delivered a tool-agnostic, configurable validation harness that also became the regression-safety net for the enterprise JFrog version upgrade, the same "platform as a product" instinct your posting describes. I built that service in Python/FastAPI with Terraform-driven environment automation and ArgoCD/Kubernetes provisioning, and at Énergir I standardized Terraform and Ansible IaC across nine runtimes while driving RCA practices that measurably reduced MTTR.

Your emphasis on "Everything as Code," GitOps workflows, and SLO/SLI definition maps closely to that work. I'm comfortable operating across both cloud and on-prem environments, having led Azure modernization migrations at Énergir alongside earlier hands-on AWS build experience.

I'm incorporated in Canada, fully bilingual, and available to start immediately.

Best regards,

Marc Berthelette
