

Marc Berthelette

Senior Site Reliability Engineer - Observability & Platform Infrastructure

Smiths Falls, ON, Canada · Remote · marc.berthelette@gmail.com

linkedin.com/in/marc-berthelette-3aba6917 · Bilingual French and English · Eligible to work in Canada · Available immediately

Professional Summary

Senior site reliability and platform engineer with 18 years of experience making production infrastructure observable, resilient, and easier to operate. Brings production ELK Stack experience, deep Linux operations, Terraform and Ansible, Python and Bash automation, 24/7 on-call, incident response, root-cause analysis, and automated remediation. At Tink, reduced on-call frequency through prevention and built self-healing automation for an unstable Elasticsearch cluster. At Desjardins, built a Python/FastAPI health service for approximately 250 enterprise repositories and automated Kubernetes test environments with ArgoCD. At Énergir, owns delivery and reliability improvements spanning 12 teams and more than 70 applications in a regulated energy environment.

Technical Skills

Site Reliability Engineering	24/7 on-call, incident response, root-cause analysis, post-incident improvements, MTTR reduction, automated remediation, runbooks, operational documentation
Observability	Elasticsearch, Logstash, Kibana, Dynatrace, Splunk, PRTG, metrics, logs, dashboards, alerting, health checks
Infrastructure as Code and Configuration	Terraform, Ansible, Puppet, Spacewalk, reusable environment standards, configuration-drift reduction
Programming and Automation	Python, FastAPI, Bash, Java, C++, SQL, NoSQL, API-based validation, command-line automation
Linux, Containers and Platforms	Red Hat Linux, CentOS, Rocky Linux, Ubuntu, Docker, Kubernetes, ArgoCD, Helm, JFrog Artifactory, CloudFoundry
Cloud and CI/CD	Microsoft Azure, AWS (EC2, S3, Route 53, VPC), Azure DevOps, GitHub Actions, Jenkins Pipeline as Code, Git
Leadership and Governance	Cross-team mentoring, code and change review, technical enablement, stakeholder communication, audit controls, regulated infrastructure

Work Experience

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – Present

- Drove root-cause analysis for critical production incidents and implemented monitoring, dashboards, alerts, and automated remediation that improved reliability and reduced recovery time.
- Standardized CI/CD across nine runtimes for 12 application teams and more than 70 applications, replacing manual delivery with reusable pipelines, validation controls, and documented operating practices.
- Separated application failures from platform-pipeline failures in reporting, reducing diagnostic toil and directing incidents to the correct engineering team.
- Led Azure modernization for several mission-critical services and implemented Terraform and Ansible practices that standardized environments and reduced configuration drift.
- Mentored and enabled 12 teams outside any reporting line through recurring technical sessions, documentation, design guidance, and hands-on delivery support.

Key technologies: Microsoft Azure, Terraform, Ansible, Linux, Azure DevOps, GitHub Actions, Python, Bash, Docker, ELK Stack, ServiceNow

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026 — *concurrent engagement alongside the Énergir role*

- Designed and built a Python/FastAPI service that tested the health and configuration of approximately 250 enterprise JFrog repositories every four hours and published operational telemetry to Dynatrace.

- Expanded a configuration-check request into a tool-agnostic, configurable validation harness that became the regression safety net for an enterprise Artifactory upgrade.
- Automated on-demand Artifactory environments with Kubernetes, ArgoCD, and Helm, giving administrators isolated and repeatable systems for testing upgrades and configuration changes.
- Built Splunk alerts for manual changes outside approved CI/CD paths, improving auditability and making production configuration drift visible.
- Produced reusable validation logic, operating guidance, and observable health signals for the broader platform-administration team.

Key technologies: Python, FastAPI, Linux, JFrog Artifactory, Docker, Kubernetes, ArgoCD, Helm, GitHub Actions, Dynatrace, Splunk

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Participated in 24/7 on-call for all production systems and reduced paging frequency from roughly one page every two rotations to one every four or five through root-cause analysis and preventive engineering.
- Built self-healing automation for an unstable Elasticsearch cluster, connecting monitoring to Bash remediation so a known failure mode no longer required a human page.
- Implemented centralized ELK Stack logging and alerting to improve production visibility and accelerate incident diagnosis across a fleet of more than 600 Linux servers.
- Automated operating-system patching and kernel-update reboots across the fleet, reducing recurring work to a monthly verification check with near-zero downtime.
- Managed fleet configuration declaratively with Puppet and Spacewalk and built inventory tooling that exposed versions, CVEs, end-of-life software, and SSL/TLS posture.
- Centralized Jenkins Pipeline as Code for more than 80 applications across 20 clients, standardizing delivery and improving release visibility.

Key technologies: Elasticsearch, Logstash, Kibana, Linux, Bash, Jenkins, Puppet, Spacewalk, PRTG, Jira, AWS, SQL, networking, incident response

SOVO Technologies — Lead Technician to Software Engineer

Montréal, QC | November 2008 – December 2017

- Owned company infrastructure, delivered a zero-downtime server relocation, and introduced redundancy that eliminated core single points of failure.
- Managed and trained technicians while serving as the final quality-assurance gate before production releases.
- Designed and wrote production software for approximately seven years, including scheduling, voice-recognition evaluation, and multilingual dictionary systems.

Key technologies: C++, Java, SQL, NoSQL, Linux, Windows Server, VMware vSphere, Cisco routing, firewall and VPN administration

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure, Montréal, QC | 2005 – 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal, QC | 2002 – 2005
