Re: Staff Site Reliability Engineer (26248)
Enverus

Hello Enverus team,

I'm applying for the Staff Site Reliability Engineer role. Your emphasis on CI/CD automation, Kubernetes, and Infrastructure as Code for a global cloud footprint is the core of what I've been doing across my last two engagements.

At Desjardins, I automated the provisioning of on-demand Artifactory environments using Kubernetes and ArgoCD, giving administrators self-service, fully configured environments for safe testing. At Énergir, I standardized Terraform and Ansible IaC practices across nine runtimes and 70+ applications, and built the observability and incident-response practice (Splunk alerting, Dynatrace dashboards, RCA) that a 24/7 operational environment depends on.

On AWS specifically: I spent roughly six months at Tink building a client's entire AWS migration target environment — EC2, S3, Route 53, VPC, self-managed memcached, and a serverless relational database — with no prior AWS experience going in. The client ultimately cancelled the migration before cutover, and the environment was provisioned by hand in the console rather than through Terraform or CloudFormation, but the hands-on build experience across that core service surface is real and I can speak to it in detail.

I'm incorporated in Canada, fully bilingual (French/English), and available to start quickly.

Best regards,

Marc Berthelette
