Re: Senior IT Cloud Engineer – Remote BC
Ontinue

Hi Ontinue team,

I'm applying for the Senior IT Cloud Engineer role. Microsoft Azure is the platform I know deepest: at Énergir I've led cloud modernization initiatives migrating mission-critical services to Azure and implemented Terraform and Ansible Infrastructure as Code practices to standardize environment provisioning — directly relevant to your Terraform/Bicep/ARM template work and Azure Automation runbook development.

I've also built CI/CD pipelines on GitHub Actions and Azure DevOps, and write automation in Python and Bash regularly — most recently a Python/FastAPI health-monitoring service at Desjardins that tested ~250 repository configurations on a schedule and published results to a dashboard. That combination of Azure infrastructure depth and scripting-driven automation maps closely to what this role calls for.

I'm incorporated in Canada, fully bilingual (French/English), and available to start quickly on a remote basis.

Best regards,

Marc Berthelette
