Hello,

I am applying for the Senior Site Reliability Engineer role on the Platform SRE team. Building paved roads that reduce toil for developers, with Python as the main tool, is the work I have done for the last five years.

At Énergir I initiated shared Jenkins pipelines used by every team already deploying through Jenkins, in an environment of about 50 developers, 12 teams and 70+ applications. Shared code carried roughly 80–90% JaCoCo coverage with tests on every commit, and I separated application-code errors from platform-pipeline errors in build reporting so teams knew whose fix a failure was. I was the primary developer contact when the delivery ecosystem broke and onboarded new engineers, so setting standards and mentoring have been part of my work without a formal title.

On observability and reliability, I migrated production Salesforce logging to direct Dynatrace ingestion, expanded the parsing to extract error types and originating classes, and built dashboards that exposed previously hidden issues. At Desjardins I built a Python/FastAPI workflow that provisioned Artifactory, tested uncached retrieval across about 250 repositories on a schedule through ArgoCD, and published results to Dynatrace, plus Splunk alerts for changes made outside CI/CD. At Tink I supported a 24/7 rotation, automated a restart attempt and an on-call page for Elasticsearch CPU saturation, and replaced reactive patching across 600+ servers with staged schedules.

Because AWS and Terraform are central to this role, to be direct: my deepest cloud is Azure. My AWS experience is a single migration target environment I built by hand (EC2, S3, Route 53, VPC), which the client cancelled before cutover, so I have not operated a production AWS workload. My Terraform work was inside another team's workflows, not modules I authored. I have deployed to Kubernetes clusters that other teams operate. I have built alerting and dashboards but have not defined formal SLOs or tracing standards. I expect the Azure foundation to shorten the AWS learning curve, but it is a gap.

I am based in Ontario, bilingual in French and English, and available immediately. Could you confirm whether the role is a fixed-term contract or an employee position? My resume is attached.

Thank you for your consideration.

Marc Berthelette
