Hello,

I am applying for the Azure Cloud Engineer role. Azure has been my main platform for the past five years, and the mix in the posting of infrastructure as code, GitHub-based pipelines, observability and incident response overlaps with work I have done.

At Énergir I helped a team move its own Nexus, Jenkins and Vault environments from manual Azure portal operations to infrastructure as code. Terraform provisioned the resource groups, networking and VMs, and Ansible configured the hosts and Docker. I later introduced Azure Storage accounts for Terraform state and Azure Key Vault in place of HashiCorp Vault. To be precise about my role, I worked inside Terraform and Ansible workflows owned by another team and proposed improvements to them. I have not authored the modules, and I would rather say so now than have it surface in an interview.

On delivery, I initiated shared Jenkins pipelines used by every team already deploying through Jenkins, in an environment of about 50 developers, 12 teams and 70+ applications, with mandatory SonarQube checks developers could not skip. On the observability side, I moved production Salesforce logging to direct Dynatrace ingestion and built dashboards that exposed previously hidden errors. At Desjardins I built a Python/FastAPI workflow that provisioned Artifactory, tested uncached retrieval across about 250 repositories on a schedule, and published results to Dynatrace, with Splunk alerts for configuration changes made outside the pipeline.

I have not run Azure Container Apps or Azure PostgreSQL in production, and I have not defined formal SLOs. At Énergir I picked up Salesforce, MuleSoft and ArcGIS delivery with no prior experience by working out how each platform actually behaves before automating it, and I would expect to do the same here.

I am based in Ontario, bilingual in French and English, incorporated in Canada and available immediately. Before going further, could you confirm the base pay range and the contracting terms for a Canada-based candidate? My resume is attached.

Thank you for your consideration.

Marc Berthelette
