Dear Hiring Team,

I am applying for the Senior Platform Integration and Monitoring Lead role on the Real Time Market Data team. The job is to keep a large production platform stable through upgrades, migrations and change, while building the automation and monitoring that make it less manual. That is the work I have done across Énergir, Desjardins and Tink.

At Tink I replaced reactive patching across more than 600 servers with staged schedules, environment and role groups, A/B batches and dependency-aware reboots, with progress and failures reported to chat. I was part of the 24/7 on-call rotation, built centralized ELK logging, and automated the first response to a recurring Elasticsearch failure: monitoring attempted a restart after two minutes of sustained CPU saturation and paged the on-call engineer if it persisted at five. I also built, unprompted, a fleet inventory that showed product owners and Ops which applications were vulnerable or approaching end of life.

At Énergir I migrated production Salesforce logging to direct Dynatrace ingestion and, with my manager's approval, expanded the parsing to extract error types and originating classes and built dashboards that exposed issues the team could not previously see. At Desjardins I built a Python/FastAPI workflow that tested about 250 Artifactory repositories on a schedule and published results to Dynatrace, with Splunk alerts for configuration changes made outside the pipeline. I also introduced AI-assisted engineering at Énergir with hard scope gates and human-validation checkpoints before any AI-generated code reaches production, which would carry over to the Copilot and agentic workflows you describe.

To be direct about fit: I have not worked on market-data or feed-processing platforms, and I have not held a formal lead title. At Énergir I drove delivery improvements and was the primary contact for developers when the ecosystem broke, and I led adoption across 12 teams without a reporting line. I would be learning the market-data domain and your change-management process, and I would rather you hear that from me now.

I am fully bilingual in French and English, based in Smiths Falls, Ontario, and available immediately. Before going further, could you confirm the number of in-office days in the Montréal hybrid arrangement and the compensation range, and whether a candidate based in Ontario is considered?

Sincerely, Marc Berthelette marc.berthelette@gmail.com
