Dear Myticas Team,

I am applying for the Platform Engineer – Azure (35991) contract. I have worked mainly in Azure for five years, and my record is in automating delivery and environments for teams in regulated industries.

At Énergir I helped a team move its Nexus, Jenkins and HashiCorp Vault environments from manual Azure portal operations to infrastructure as code, using Terraform to provision resource groups, networking and virtual machines and Ansible to configure them. I later introduced Azure Storage accounts for Terraform state and Azure Key Vault to replace HashiCorp Vault. I also initiated shared Jenkins pipelines used by every team already deploying through Jenkins, in an environment of about 50 developers, 12 teams and 70+ applications, with mandatory quality gates, so I am comfortable building deployment pipelines and documenting them so teams can use them.

My best work usually starts when the request is narrower than the real problem. At Desjardins I was asked to verify the configuration of Artifactory repositories. I built a Python/FastAPI workflow that provisioned the environment, applied configuration from a chosen Git reference, tested uncached retrieval across about 250 repositories on a schedule, and published results to Dynatrace. I made most of the validation logic tool-agnostic and the test set configurable so administrators could add their own cases. I chose the larger solution because it was best for the client, not the cheapest.

To be direct about fit: I have not designed an Azure landing zone from scratch, and I have not built Azure hub-spoke networking, private endpoints or Azure Policy initiatives hands-on. My Terraform work used workflows owned by another team, and I have not written Bicep. I do learn unfamiliar platforms quickly under a delivery clock. At Énergir I picked up Salesforce, MuleSoft and ArcGIS delivery with no prior experience, and I would expect to close these gaps quickly. I would rather you hear the boundaries from me than find them in an interview.

I am incorporated in Canada, so I can start immediately as a contractor, and I am bilingual in French and English. I am based in Smiths Falls, Ontario. Before going further, could you confirm the hourly rate, contract length, and whether the client accepts a Canada-based contractor working remotely from Ontario?

Sincerely, Marc Berthelette marc.berthelette@gmail.com
