Dear Hiring Team,

I am applying for the Senior DevOps Integrator role in the Software Engineering – Developer Experience team. The job is to run the CI/CD platforms that delivery teams depend on and make them dependable, which is the work I have done for the past five years at Énergir.

At Énergir I initiated shared Jenkins pipelines used by every team already deploying through Jenkins, in an environment of about 50 developers, 12 teams and 70+ applications, with mandatory SonarQube checks that teams could not simply skip. Shared pipeline code carried roughly 80–90% JaCoCo coverage with tests on every commit. I replaced a 15-step MuleSoft checklist with version-based deployments of QA-tested artifacts, automated routine Oracle releases, and then ran recurring enablement sessions with each team, because a standard nobody adopts is shelfware.

My best work usually starts when the request is narrower than the real problem. I was asked to replace legacy Salesforce ANT deployment scripts. I moved delivery to the official Salesforce CLI, then built validation that deployed each candidate merge into a dedicated sandbox and ran the full test suite, so problems surfaced before the release rather than in the deployment window. At Desjardins I built a Python/FastAPI workflow that tested about 250 Artifactory repositories on a schedule and published results to Dynatrace, and worked with GitHub Actions and ArgoCD. At Tink I standardized Jenkins pipelines for 80+ applications, supported a 24/7 rotation and replaced reactive patching across 600+ servers.

To be direct about the fit: my Terraform and Ansible experience is as a user of workflows owned by another team, and I have used Kubernetes and ArgoCD as an application and platform user rather than as a cluster owner. My AWS experience is a roughly six-month hand-built environment at Tink that the client cancelled before cutover, so I would be learning your production AWS environment, and I have not worked in Go. I learn unfamiliar platforms quickly under a delivery clock, but I would rather you hear the boundaries from me than find them in an interview.

I am fully bilingual in French and English, based near Ottawa, and available immediately. Before going further, I would like to confirm the in-office schedule for the Montréal hybrid arrangement and the compensation range. I would welcome a conversation about the platform and where your team wants to take it.

Sincerely, Marc Berthelette marc.berthelette@gmail.com
