Hello,

I am applying for the Implementation Specialist – Senior Linux and Cloud Engineer role. The combination of Linux administration, cloud, and automation with Ansible, Terraform or similar matches how my career has developed.

My Linux background is hands-on. At Tink I replaced reactive patching across 600+ servers with staged Spacewalk schedules, environment and role groups, A/B batches for frontend and middleware, and dependency-aware reboots, with progress and failures reported to Rocket.Chat. I managed fleet configuration with Puppet, built an inventory of installed applications across Unix and Windows servers, supported a 24/7 rotation, and automated a restart attempt and on-call page for Elasticsearch CPU saturation. At SOVO I led, with a second technician, most of the redundancy work across HAProxy, authentication and file servers for live-captioning production, on VMware vSphere, and ran two phased office relocations.

For the last five years my main cloud has been Azure. At Énergir I helped a team move its Nexus, Jenkins and Vault environments from manual portal operations to infrastructure as code, and introduced Azure Key Vault. At Desjardins I built a Python/FastAPI workflow that tested about 250 Artifactory repositories on a schedule, deployed through Kubernetes and ArgoCD, and published results to Dynatrace. I also initiated shared Jenkins CI/CD used across 12 teams and 70+ applications.

To be direct about the gaps: my Terraform and Ansible work was inside another team's workflows rather than modules I authored. My AWS experience is a single migration target environment I built by hand that the client cancelled before cutover, and I have no GCP. My Kubernetes experience is deploying applications to clusters other teams operate. I hold no cloud or Kubernetes certifications and have no air-gapped experience. I have mentored colleagues informally but have not led client engagements as a consultant, so I would want to understand how the customer-facing side of the role works.

I am bilingual in French and English and available immediately. Could you tell me the salary range, the expected office days in Kanata, how often customer-site travel occurs, and whether the federal client work needs a security clearance? My resume is attached.

Thank you for your consideration.

Marc Berthelette
