Hello,

I am applying for the DevOps Developer, AI Automation role. The requirement to set guardrails and access controls for AI agents stood out, because it is work I have already done and want to do more of.

Over the last months at Énergir I introduced AI-assisted engineering practices into the team's tooling. I researched and applied hard scope gates and human-validation checkpoints before any AI-generated code could reach production, because the speed only helps if someone remains accountable for what ships. I also told leadership that the organization had no equivalent safeguards. That concern was not acted on, which is part of why I am looking for a team that takes it seriously.

The rest of my background is platform and delivery work. I initiated shared Jenkins pipelines for an environment of about 50 developers, 12 teams and 70+ applications, with mandatory SonarQube gates, and separated application failures from platform failures in build reporting so a team could tell at a glance whose fix it was. I moved production Salesforce logging to direct Dynatrace ingestion and built dashboards that exposed previously hidden errors. At Desjardins I built a Python/FastAPI workflow that tested uncached retrieval across about 250 Artifactory repositories on a schedule, ran through ArgoCD, and reported to Dynatrace. At Tink I built ELK log aggregation and automated recovery from Elasticsearch CPU saturation.

I am thinner than the posting in several places. My Terraform and Ansible work was inside workflows owned by another team, not modules I wrote. My AWS experience is a hand-built migration environment that the client cancelled before cutover, and I have no GCP experience. I have used GitHub Actions and Jenkins rather than CircleCI, and my Kubernetes work is as an application and platform user, not a cluster owner. In each ecosystem I have entered, I learned it by working out how it behaves before automating it, and that is how I would approach yours.

I am based in Ontario, bilingual in French and English, and available immediately. Could you let me know the base salary range and the expected in-office days per week? My resume is attached.

Thank you for your consideration.

Marc Berthelette
