Hello,

I am applying for the Senior SRE / Production Reliability Engineer contract. I am incorporated in Canada and work through my corporation, so the Corp-to-Corp option suits me.

The work you describe, keeping production stable, finding problems before users do and automating the checks, is what I have done for most of my career. At Tink I supported a 24/7 production rotation, built ELK log aggregation and automated the response to Elasticsearch CPU saturation: a restart attempt after two minutes, and a page to on-call if it was still saturated at five. I replaced reactive patching across 600+ servers with staged schedules and dependency-aware reboots, and built a fleet inventory that gave product owners and Ops vulnerability, end-of-life and TLS visibility.

At Énergir I moved production Salesforce logging to direct Dynatrace ingestion and built dashboards that exposed previously hidden errors, and ran Jenkins smoke tests that detected external changes such as firewall changes and notified Teams. When Salesforce nightly failures sat unresolved for two weeks, I escalated the deployment risk to the project director and fixes across 4–5 teams followed within 48 hours. At Desjardins I built a Python/FastAPI workflow that tested about 250 Artifactory repositories on a schedule and published results to Dynatrace, with Splunk alerts for configuration changes made outside the pipeline.

To be direct about the gaps: my reliability experience sits inside a DevOps career rather than a formal SRE title, so I would not claim ten years in an SRE role. I have no contact-centre or telephony experience, and I have not worked with IBM MQ, DB2, Imperva or F5. My DNS and load-balancer work has been practical rather than specialist, and I have not run formal chaos or load-testing programs. Azure is my main cloud, and I have no GCP.

I am bilingual in French and English and available immediately. Could you confirm the end client, the rate and the working hours? My resume is attached.

Thank you for your consideration.

Marc Berthelette
