Hello,

I am applying for the Senior DevOps Engineer role on the Wind River Cloud team (J000698881). The part of the posting that matches my work most closely is improving build reliability, failure analysis and release readiness, and building automation that removes manual effort from the pipeline.

At Énergir I initiated shared Jenkins pipelines used by every team already deploying through Jenkins, in an environment of about 50 developers, 12 teams and 70+ applications. Shared pipeline code carried roughly 80–90% JaCoCo coverage with unit tests on every commit, and I built sample applications for integration testing. I separated application-code failures from platform-pipeline failures in build reporting, so it was clear who owned each fix. I replaced a 15-step MuleSoft checklist with version-based deployments of QA-tested artifacts, and added SQL checks that stopped a recurring Oracle encoding failure. I was the primary developer contact when delivery broke and I onboarded new engineers.

At Desjardins I wrote a Python/FastAPI workflow that tested uncached retrieval across about 250 Artifactory repositories on a schedule and published results to Dynatrace. Earlier, I came to DevOps from C++ and Java development, and at Tink I standardized Jenkins pipelines for 80+ applications and replaced reactive patching of 600+ Linux servers with staged schedules.

To be direct about the gaps: I have not used Gerrit, Zuul or GitLab CI, and I have not worked with OpenStack or StarlingX or contributed to open-source projects. My Kubernetes experience is deploying applications to clusters that other teams operate, so I would not be an expert in the platform internals your team builds. My Terraform and Ansible work was inside another team's workflows. I have used Bitbucket and Jenkins extensively for years, and I learn unfamiliar toolchains by reading how they behave before automating them.

I am in Ontario, bilingual in French and English, and available immediately. Please let me know the expected number of office days in Kanata. My resume is attached.

Thank you for your consideration.

Marc Berthelette
