Marc Berthelette

Platform Engineer — Azure, Infrastructure as Code and Azure DevOps Delivery

Smiths Falls, ON, Canada · Remote · marc.berthelette@gmail.com
marcberthelette.com · LinkedIn
Bilingual: French / English · Incorporated in Canada · Available immediately

Professional Summary

Senior engineer and consultant with nearly 18 years across infrastructure, development and operations, incorporated in Canada and available immediately. Five years in Azure, including helping move team-owned Nexus, Jenkins and Vault environments to Infrastructure as Code using another team's Terraform and Ansible workflows, and introducing Azure Key Vault. Built shared pipelines for 12 teams and 70+ applications and documented them for developers. Has not designed an Azure landing zone from scratch or written Bicep.

Technical Skills

Cloud & Infrastructure: Azure (resource groups, networking, VMs, Storage accounts, Key Vault), Terraform/Ansible workflows (user of another team's modules), Linux
CI/CD: Azure DevOps, Jenkins, GitHub Actions, SonarQube, JFrog Artifactory, Nexus
Containers & Observability: Docker, Kubernetes application deployments, ArgoCD, Dynatrace, Splunk, ELK
Programming: Python, FastAPI, Bash, Java, SQL

Work Experience

Énergir — Senior DevOps Engineer (Contract)

Montréal, QC | September 2021 – September 2026
Five-year consulting engagement, renewed four times.

- Helped a team move team-owned Nexus, Jenkins controllers and agents, and HashiCorp Vault from manual Azure portal operations to Infrastructure as Code, using another team's Terraform (resource groups, networking, VMs) and Ansible (host and Docker configuration) workflows; later introduced Azure Storage accounts for Terraform state and Azure Key Vault in place of HashiCorp Vault.
- Initiated shared Jenkins pipelines adopted by all teams already deploying through Jenkins, in an environment of about 50 developers, 12 teams and 70+ applications; achieved approximately 80–90% JaCoCo coverage of shared pipeline code with per-commit unit tests and built sample applications for integration testing.
- Enforced shared stages and mandatory SonarQube checks in the shared pipelines so developers could not simply skip them.
- Separated application-code errors from platform-pipeline errors in build reporting so teams could see whose fix a failure was.
- Replaced legacy ANT deployment scripts with the official Salesforce CLI and built validation that deployed each candidate merge into a dedicated sandbox and ran the full test suite.
- Ran recurring enablement sessions (about six per year) with each application team after pipeline delivery; onboarded new DevOps engineers and developers and was the primary developer contact when the delivery ecosystem broke.
- Migrated production Salesforce logs to direct Dynatrace ingestion; expanded error parsing and dashboards to help the team investigate previously hidden issues.
- Automated routine Oracle releases without emergency-access requests; manual steps retained approvals. Eliminated encoding incidents with SQL checks and separate SQL/Forms locale settings.

Key technologies: Jenkins, SonarQube, Azure, Python, JaCoCo, Salesforce CLI, Oracle, Node.js, MuleSoft, Dynatrace

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026
Concurrent with the Énergir engagement.

- Built a Python/FastAPI workflow that provisioned Artifactory, applied configuration from a selected Git reference, and tested uncached artifact retrieval across approximately 250 repositories.

- Deployed the suite through ArgoCD/GitOps for scheduled execution, publishing configuration-version and artifact-level results to Dynatrace to expose configuration and upstream connectivity failures.
- Made most validation logic tool-agnostic and the artifact test set configurable so platform administrators could add their own cases.
- Implemented artifact retention policies and Splunk alerts for configuration changes made outside CI/CD.

Key technologies: Python, FastAPI, Artifactory, Kubernetes, ArgoCD, Dynatrace, Splunk

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Standardized Jenkins pipelines for 10–15 developers supporting 80+ applications and 20+ clients, integrating release details and Jira references into deployment reporting.
- Replaced reactive patching across 600+ servers with staged Spacewalk schedules, environment/role groups, A/B frontend and middleware batches, and dependency-aware reboots.
- Controlled updates through client-specific package repositories; published patch/reboot progress and failures to Rocket.Chat, with existing PRTG monitoring covering service health.
- Built an AWS migration target using console provisioning (EC2, S3, Route 53, VPC, caching and database services); the client cancelled before production cutover.

Key technologies: Linux, Jenkins, Puppet, Spacewalk, PRTG, ELK, AWS, Rocket.Chat

SOVO Technologies — Lead Technician → Software Engineer

Montréal, QC | November 2008 – December 2017

- Led and performed most redundancy work across HAProxy, authentication, speech-recognition servers and file services with a second technician; supported live-captioning requirements of three minutes maximum downtime per broadcast and eight-second caption latency.
- Owned IT planning and execution for two office relocations involving approximately 15–20 workstations, preparing networks and cabling and coordinating phased moves to minimize disruption.
- Developed production scheduling, speech-recognition evaluation, and multilingual dictionary software; served as the final quality gate before production releases.

Key technologies: HAProxy, Active Directory, VMware vSphere, Linux, Windows Server, C++, Java, SQL

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure (ÉTS), Montréal | 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal | 2005
