Marc Berthelette

Senior DevOps Integrator — CI/CD Platforms, Developer Experience and Reliability

Smiths Falls, ON, Canada · Remote · marc.berthelette@gmail.com
marcberthelette.com · LinkedIn
Bilingual: French / English · Incorporated in Canada · Available immediately

Professional Summary

Senior engineer with nearly 18 years across infrastructure, development and operations. Built shared Jenkins pipelines with mandatory SonarQube gates in an environment of 12 teams and 70+ applications, then ran enablement sessions so teams used them. Built Python/FastAPI automation and Dynatrace reporting at Desjardins and supported 24/7 production on-call at Tink. Fully bilingual in French and English. Terraform and Kubernetes experience is as a user of platforms other teams operate.

Technical Skills

CI/CD & Platforms: Jenkins, GitHub Actions, Azure DevOps, SonarQube, JaCoCo, JFrog Artifactory, Nexus
Programming: Python, FastAPI, Bash, Java, C++, SQL
Cloud & Infrastructure: Azure, Terraform/Ansible workflows (user of another team's modules), Linux, Puppet, AWS migration environment
Containers & Observability: Kubernetes application deployments, ArgoCD, Docker, Dynatrace, Splunk, ELK

Work Experience

Énergir — Senior DevOps Engineer (Contract)

Montréal, QC | September 2021 – September 2026
Five-year consulting engagement, renewed four times.

- Initiated shared Jenkins pipelines adopted by all teams already deploying through Jenkins, in an environment of about 50 developers, 12 teams and 70+ applications; achieved approximately 80–90% JaCoCo coverage of shared pipeline code with per-commit unit tests and built sample applications for integration testing.
- Enforced shared stages and mandatory SonarQube checks in the shared pipelines so developers could not simply skip them.
- Separated application-code errors from platform-pipeline errors in build reporting so teams could see whose fix a failure was.
- Ran recurring enablement sessions (about six per year) with each application team after pipeline delivery; onboarded new DevOps engineers and developers and was the primary developer contact when the delivery ecosystem broke.
- Replaced legacy ANT deployment scripts with the official Salesforce CLI and built validation that deployed each candidate merge into a dedicated sandbox and ran the full test suite.
- Replaced a 15-step MuleSoft checklist with version-based deployments of QA-tested artifacts, moving release preparation ahead of production windows and simplifying rollback.
- Automated routine Oracle releases without emergency-access requests; manual steps retained approvals. Eliminated encoding incidents with SQL checks and separate SQL/Forms locale settings.
- Migrated production Salesforce logs to direct Dynatrace ingestion; expanded error parsing and dashboards to help the team investigate previously hidden issues.

Key technologies: Jenkins, SonarQube, Azure, Python, JaCoCo, Salesforce CLI, Oracle, Node.js, MuleSoft, Dynatrace

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026
Concurrent with the Énergir engagement.

- Built a Python/FastAPI workflow that provisioned Artifactory, applied configuration from a selected Git reference, and tested uncached artifact retrieval across approximately 250 repositories.
- Deployed the suite through ArgoCD/GitOps for scheduled execution, publishing configuration-version and artifact-level results to Dynatrace to expose configuration and upstream connectivity failures.
- Implemented artifact retention policies and Splunk alerts for configuration changes made outside CI/CD.

- Worked with Kubernetes, ArgoCD and GitHub Actions in a large financial-services environment.

Key technologies: Python, FastAPI, GitHub Actions, Artifactory, Kubernetes, ArgoCD, Dynatrace, Splunk

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Standardized Jenkins pipelines for 10–15 developers supporting 80+ applications and 20+ clients, integrating release details and Jira references into deployment reporting.
- Replaced reactive patching across 600+ servers with staged Spacewalk schedules, environment/role groups, A/B frontend and middleware batches, and dependency-aware reboots.
- Controlled updates through client-specific package repositories; published patch/reboot progress and failures to Rocket.Chat, with existing PRTG monitoring covering service health.
- Automated PRTG-triggered response to Elasticsearch CPU saturation: attempted a process restart after two minutes and alerted on-call at five minutes if saturation persisted; supported a 24/7 rotation.
- Built an AWS migration target using console provisioning (EC2, S3, Route 53, VPC, caching and database services); the client cancelled before production cutover.

Key technologies: Linux, Jenkins, Puppet, Spacewalk, PRTG, ELK, AWS, Rocket.Chat

SOVO Technologies — Lead Technician → Software Engineer

Montréal, QC | November 2008 – December 2017

- Led and performed most redundancy work across HAProxy, authentication, speech-recognition servers and file services with a second technician; supported live-captioning requirements of three minutes maximum downtime per broadcast and eight-second caption latency.
- Owned IT planning and execution for two office relocations involving approximately 15–20 workstations, preparing networks and cabling and coordinating phased moves to minimize disruption.
- Developed production scheduling, speech-recognition evaluation, and multilingual dictionary software; served as the final quality gate before production releases.

Key technologies: HAProxy, Active Directory, VMware vSphere, Linux, Windows Server, C++, Java, SQL

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure (ÉTS), Montréal | 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal | 2005
