

Marc Berthelette

Senior DevOps Engineer · Infrastructure Automation · Kubernetes & AWS

Smiths Falls, ON, Canada · Remote · marc.berthelette@gmail.com

linkedin.com/in/marc-berthelette-3aba6917 · Bilingual French and English · Incorporated in Canada · Available immediately

Professional Summary

Senior DevOps engineer with 18 years of infrastructure and automation experience, including hands-on AWS build work (EC2, S3, Route 53, VPC, self-managed memcached, serverless relational database — built with no prior AWS experience, provisioned by hand, engagement cancelled before cutover) and deep, current Terraform and Kubernetes/ArgoCD practice standardizing production environments at Énergir and Desjardins. Learns unfamiliar platforms cold under a delivery deadline — demonstrated across three employers over eight years — and consistently delivers the structurally larger automation the problem actually needed, not just what was asked.

Technical Skills

Infrastructure as Code	Terraform, Ansible, Puppet, environment standardization, configuration-drift elimination
Containers & Orchestration	Kubernetes, Docker, ArgoCD — environment provisioning, automation, on-demand deployment
Cloud Platforms	Microsoft Azure (production, 5–10 service migrations led), AWS (EC2, S3, Route 53, VPC — hands-on build, non-production, see Work Experience)
CI/CD	Azure DevOps, GitHub Actions, Jenkins Pipeline as Code, Git
Observability & Reliability	Dynatrace, Splunk, ELK Stack, root-cause analysis, MTTR reduction, proactive monitoring and alerting, automated remediation
Programming & Automation	Python, FastAPI, Bash, Java, SQL, NoSQL
Systems & Networking	Red Hat Linux, CentOS, Rocky Linux, Ubuntu, NetScaler, Cisco routing, firewall/VPN administration

Work Experience

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – Present

- Led cloud modernization migrating several mission-critical services to Microsoft Azure, implementing Terraform and Ansible IaC practices that standardized environment provisioning and eliminated configuration drift across dev, staging, and production.
- Standardized CI/CD delivery across nine distinct runtimes for 12 application teams and 70+ applications, entering most ecosystems with no prior experience and reverse-engineering each before automating it.
- Drove root-cause analysis on critical production incidents and built proactive monitoring, dashboards, and automated remediation to reduce MTTR.
- Cut false-positive pipeline failures by separating application-code errors from platform-pipeline errors in reporting.

Key technologies: Microsoft Azure, Terraform, Ansible, Azure DevOps, GitHub Actions, Python, Dynatrace, Splunk, IaC

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026 — *concurrent engagement alongside the Énergir role*

- Automated provisioning of on-demand Artifactory environments using Kubernetes and ArgoCD, giving administrators repeatable, isolated environments for safely testing configuration changes and upgrades.
- Designed and built a Python/FastAPI service that tested the configuration of ~250 enterprise Artifactory repositories every 4 hours and published results to Dynatrace.
- Extended the engagement past its original scope by building the validation logic tool-agnostic and the test set configurable.
- Built Splunk alerting to detect manual configuration changes made outside the CI/CD pipeline.

Key technologies: Kubernetes, ArgoCD, Python, FastAPI, GitHub Actions, Dynatrace, Splunk, Docker, Helm

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Built the compute, caching, and database layers of a client's full AWS migration target environment — EC2, S3, Route 53, self-managed memcached on EC2, and a serverless relational database — and contributed to VPC/network and Route 53 design, with no prior AWS experience. Roughly 6 months of work; resources were provisioned by hand in the AWS console, not through Terraform or CloudFormation; the client cancelled the migration before cutover.
- Managed fleet configuration as code via Puppet and Spacewalk across 600+ servers, including automated kernel-update reboots reduced to a monthly verification check with near-zero downtime.
- Centralized Jenkins Pipeline as Code across a team of 10–15 developers maintaining 80+ applications for 20+ clients.
- Built a self-healing response for a recurring, unstable Elasticsearch cluster — monitoring triggered an automated Bash remediation script instead of paging a human.
- Conceived and built, unprompted, a software inventory platform cataloguing every application and version across the 600+ server fleet, surfacing CVE exposure, end-of-life software, and SSL/TLS certificate scoring.

Key technologies: AWS (EC2, S3, Route 53, VPC), Puppet, Spacewalk, Jenkins, ELK Stack, Bash

SOVO Technologies — Lead Technician to Software Engineer

Montréal, QC | November 2008 – December 2017

- Owned company IT infrastructure, delivered a zero-downtime server relocation, and introduced redundancy that eliminated single points of failure.
- Wrote production software for approximately seven years before the title formalized it.

Key technologies: C++, Java, SQL, Windows Server, VMware vSphere, Active Directory

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure, Montréal, QC | 2005 – 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal, QC | 2002 – 2005
