Professional Summary

Senior platform and reliability engineer with 18 years of experience building the infrastructure other teams build on top of. Standardized CI/CD and delivery platforms across 12 application teams and 70+ applications at Énergir, running recurring enablement sessions outside any reporting line to turn delivered tooling into real adoption. Deep Microsoft Azure, Terraform, and Ansible infrastructure-as-code practice, with Kubernetes and ArgoCD automation for on-demand environment provisioning at Desjardins. Currently applies scoped, human-validated AI-assisted engineering practices in production delivery — introducing hard scope gates and validation checkpoints before AI-generated code ships. The differentiator is judgment: given a narrow scope, repeatedly delivers the structurally larger platform underneath it.

Technical Skills

Platform Engineering & Enablement	Golden-path standardization, CI/CD platform design, internal tooling, cross-team enablement without reporting authority, documentation-driven adoption
AI-Assisted Engineering	Scoped/gated AI-assisted development, human-validation checkpoints, agentic-tooling risk assessment, production-promotion controls
Infrastructure as Code	Terraform, Ansible, Puppet, GitOps-style environment provisioning, configuration-drift reduction
Containers & Orchestration	Kubernetes, Docker, ArgoCD — on-demand environment provisioning and automation
Site Reliability Engineering	Root-cause analysis, MTTR reduction, incident response, proactive monitoring and alerting, automated remediation
Observability	Dynatrace, Splunk, ELK Stack (Elasticsearch, Logstash, Kibana)
Cloud & CI/CD	Microsoft Azure, AWS (EC2, S3, Route 53, VPC), Azure DevOps, GitHub Actions, Jenkins
Programming & Automation	Python, FastAPI, Bash, Java, SQL, NoSQL

Work Experience

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – Present

- Drove CI/CD and platform-engineering adoption across 12 application teams and 70+ applications outside any reporting line, running recurring enablement sessions (~6/year) that turned delivered tooling into actual usage.
- Standardized CI/CD delivery across nine distinct runtimes — Java, Node.js, Python, Spark, Oracle, CloudFoundry, MuleSoft, Salesforce, and Databricks — entering most with no prior experience and reverse-engineering each before automating it.
- Introduced AI-assisted engineering practices into the team's tooling over the past 6–9 months, researching and applying hard scope gates and human-validation checkpoints before any AI-generated code reaches production; flagged to leadership that the organization has no equivalent organizational safeguards.
- Led Azure modernization migrating several mission-critical services with Terraform and Ansible IaC, standardizing provisioning and reducing configuration drift.
- Drove root-cause analysis on critical production incidents and built proactive monitoring, dashboards, and automated remediation to reduce MTTR.

Key technologies: Microsoft Azure, Terraform, Ansible, Azure DevOps, GitHub Actions, Python, Dynatrace, Splunk, IaC

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026 — *concurrent engagement alongside the Énergir role*

- Automated provisioning of on-demand Artifactory environments using Kubernetes and ArgoCD, giving administrators repeatable, isolated environments for safely testing configuration changes and upgrades.
- Designed and built a Python/FastAPI service that tested the configuration of ~250 enterprise Artifactory repositories every 4 hours and published results to Dynatrace.
- Extended the engagement past its original scope by building the validation logic tool-agnostic and the test set configurable — the same harness then de-risked the enterprise Artifactory version upgrade.
- Built Splunk alerting to detect manual configuration changes made outside the CI/CD pipeline, improving auditability.

Key technologies: Kubernetes, ArgoCD, Python, FastAPI, GitHub Actions, Dynatrace, Splunk, Docker, Helm

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Centralized Jenkins Pipeline as Code across a team of 10–15 developers maintaining 80+ applications for 20+ clients, standardizing pipeline steps regardless of underlying tech stack.
- Conceived and built, unprompted and outside any assigned scope, a software inventory platform cataloguing every installed application and version across a 600+ server fleet — surfacing CVE exposure, end-of-life software, and SSL/TLS certificate scoring to product owners who previously had no such visibility.
- Managed fleet configuration as code via Puppet and Spacewalk; built centralized log aggregation using the ELK Stack.
- Built the compute, caching, and database layers of a client's full AWS migration target environment — EC2, S3, Route 53, self-managed memcached, serverless relational database — with no prior AWS experience; the client cancelled the migration before cutover.

Key technologies: Jenkins, Puppet, Spacewalk, ELK Stack, Bash, AWS (EC2, S3, Route 53, VPC), CVE/vulnerability tracking

SOVO Technologies — Lead Technician to Software Engineer

Montréal, QC | November 2008 – December 2017

- Owned company IT infrastructure, delivered a zero-downtime server relocation, and introduced redundancy that eliminated single points of failure.
- Wrote production software for approximately seven years before the title formalized it: a production scheduling system, then a voice recognition evaluation system and multi-language dictionary infrastructure.

Key technologies: C++, Java, SQL, Windows Server, VMware vSphere, Active Directory

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure, Montréal, QC | 2005 – 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal, QC | 2002 – 2005
