ANVIL

Re: Senior Infrastructure Engineer (Forward Deployed), Ottawa

Dear ANVIL Hiring Team,

I'm applying for the Senior Infrastructure Engineer role supporting your defence and public safety customers. Standing up secure, containerized infrastructure and owning the technical deployment process end to end is close to how I've operated throughout my career, most recently in regulated environments where security and auditability are non-negotiable.

At Desjardins, I designed and built a Python/FastAPI health-monitoring service that continuously validated the configuration of roughly 250 remote Artifactory repositories, and automated the provisioning of on-demand corporate environments using Kubernetes and ArgoCD so administrators could safely test configuration changes and upgrades before they touched production. I also built Splunk alerting to catch configuration changes made outside the CI/CD pipeline and implemented artifact lifecycle policies for retention and compliance — the same supply-chain-security discipline your role calls for, applied in an enterprise financial-services environment where mistakes are expensive.

At Énergir, I led cloud modernization work migrating mission-critical services to Microsoft Azure and partnered with Enterprise Architecture on resilient, cost-optimized infrastructure aligned with zero-trust principles, while standardizing CI/CD and Infrastructure as Code (Terraform, Ansible) across 12 application teams. Earlier, at Tink, I managed a 600+ server Linux fleet as declarative configuration rather than hand-tuned machines, and carried 24/7 on-call responsibility for production systems. Across all of these roles, I've had to earn trust with technical and non-technical stakeholders alike, translate infrastructure risk into terms they could act on, and document the process clearly enough that others could rely on it — the same customer-facing discipline this role requires.

I should be upfront on the clearance requirement: I'm a Canadian citizen with a clean, verifiable background and no prior clearance history, so I understand I'd be starting the Top Secret clearance process fresh rather than transferring an existing one. I'm glad to discuss how that timeline would work alongside a start date.

I'm incorporated in Canada, fully bilingual (French/English), and available immediately.

Best regards,

Marc Berthelette
