CIRA

Re: DevOps Specialist, GitLab CI/CD (6-month contract, Ottawa, Hybrid)

Dear CIRA Hiring Team,

I'm applying for the DevOps Specialist role supporting the CIRA Registry Platform. Your focus on turning common delivery needs into reusable CI/CD components — rather than solving the same problem separately for every application team — is close to what I spent the last six months doing at Desjardins.

There, I designed and built a Python/FastAPI health-monitoring service that automatically tested the configuration of roughly 250 remote Artifactory repositories every four hours across Docker, Helm, Node.js, Maven, Python, NuGet, and Debian package types, publishing results to Dynatrace with technology-segmented dashboards. Asked to verify repository configuration, I built the validation logic tool-agnostic rather than JFrog-specific and made the test set configurable — so the same harness later served as the regression-safety net for an enterprise-wide Artifactory version upgrade. I also built Splunk alerting to catch configuration changes made outside the CI/CD pipeline and implemented artifact lifecycle policies for retention and compliance — the same "security and supply-chain practices designed in, not bolted on" posture your posting describes.

At Énergir, I standardized CI/CD across nine runtimes, including Java, for 12 application teams and 70+ applications — and drove adoption through recurring enablement sessions rather than one-off fixes, establishing the kind of shared standards and coaching your role calls for. My day-to-day CI/CD tooling has been Jenkins, GitHub Actions, and Azure DevOps rather than GitLab specifically, but the underlying pipeline design, artifact governance, and container registry work (JFrog Artifactory, Nexus, Docker) transfer directly, and I pick up new CI/CD ecosystems quickly — the Desjardins engagement itself started with no prior JFrog experience.

I'm incorporated in Canada, based within commuting range of Ottawa, fully bilingual (French/English), and available immediately for a contract engagement.

Best regards,

Marc Berthelette
