VeriPark

Re: Senior Support and Azure Infra Engineer (Remote, Canada)

Dear Hiring Team,

I'm writing to express interest in the Senior Support and Azure Infra Engineer role at VeriPark. Over 18 years in DevOps and platform engineering — most recently leading Azure modernization at Énergir and a JFrog Artifactory reliability engagement at Desjardins, a Canadian financial institution — I've built deep, hands-on Azure expertise across compute, networking, RBAC, and IaC, plus the habit of fixing root causes instead of patching around them.

At Énergir, I configured RBAC, Azure Firewall, VNets, NSG, and Private Link while migrating 5–10 mission-critical services to Azure, and built the proactive monitoring, dashboards, and automated remediation that reduced Mean Time to Recovery across the application estate — the same discipline your posting asks for around Azure Monitor and Log Analytics, applied with a different observability toolchain (Dynatrace/Splunk). At Desjardins, I used Kubernetes and ArgoCD to automate on-demand provisioning of fully configured environments, directly relevant to your AKS-based infrastructure.

I also bring real experience guiding others without a formal reporting line: at Énergir I ran recurring enablement sessions with 12 application teams to turn delivered tooling into actual practice — the same instinct your posting asks for in mentoring junior Azure support staff.

One thing I'll be upfront about: I don't currently hold the Azure Solutions Architect Expert or Administrator Associate certifications your posting lists as preferred. My Azure depth comes from years of hands-on production work rather than certification, and I'm glad to speak to specific scenarios in interview to demonstrate it directly.

I'd welcome the chance to discuss how this background fits VeriPark's Azure environment. Thank you for your consideration.

Best regards,

Marc Berthelette
