Bilingual: French / English · Incorporated in Canada · Available immediately

Professional Summary

Senior engineer with nearly 18 years across infrastructure, development, and operations. Delivered production reliability through preventive validation, monitoring, fleet automation, and incident response. Experience spans energy at Énergir, financial services at Desjardins, a 600+ server fleet at Tink, and live-captioning infrastructure with strict availability and latency requirements.

Technical Skills

Reliability: Incident response, root cause analysis, on-call support, automated remediation, Linux
Observability: Dynatrace, Splunk, ELK, PRTG; Python, FastAPI, Bash
Cloud & Infrastructure: Azure, Terraform/Ansible workflows, Puppet, Spacewalk, AWS migration environment
Delivery: Jenkins, GitHub Actions, Azure DevOps, Artifactory, Kubernetes application deployments, ArgoCD

Work Experience

Énergir — Senior DevOps Engineer (Contract)

Montréal, QC | September 2021 – September 2026
Five-year consulting engagement, renewed four times.

- Implemented four-hourly Jenkins smoke tests with Teams alerts to detect external dependency failures, including firewall changes; clarified pipeline-versus-application failure ownership.
- Achieved approximately 80–90% JaCoCo coverage of shared pipeline code with per-commit tests; built sample applications for manual integration testing across supported technology stacks.
- Eliminated recurring Oracle encoding incidents with SQL encoding checks and separate SQL/Forms locale settings; converted existing SQL files and documented procedures for developers.
- Built nightly Salesforce validation; escalated persistent failures to the project director, prompting fixes across 4–5 teams within 48 hours and enabling the project to deploy on schedule.
- Initiated and defined requirements for an availability dashboard covering Jenkins, Vault, Logstash and Nexus in development and production; a colleague implemented it.

Key technologies: Jenkins, Azure, Python, JaCoCo, Salesforce CLI, Oracle, Node.js, MuleSoft

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026
Concurrent with the Énergir engagement.

- Built a Python/FastAPI workflow that provisioned Artifactory, applied configuration from a selected Git reference, and tested uncached artifact retrieval across approximately 250 repositories.
- Deployed the suite through ArgoCD/GitOps for scheduled execution, publishing configuration-version and artifact-level results to Dynatrace to expose configuration and upstream connectivity failures.
- Implemented artifact retention policies and Splunk alerts for configuration changes made outside CI/CD.

Key technologies: Python, FastAPI, Artifactory, Kubernetes, ArgoCD, Dynatrace, Splunk

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Automated PRTG-triggered response to Elasticsearch CPU saturation: attempted a process restart after two minutes and alerted on-call at five minutes if saturation persisted; supported a 24/7 rotation.
- Replaced reactive patching across 600+ servers with staged Spacewalk schedules, environment/role groups, A/B frontend and middleware batches, and dependency-aware reboots.
- Controlled package versions through client-specific repositories and reported update/reboot progress and failures to Rocket.Chat; existing PRTG monitoring provided service-health checks.
- Built inventory across Unix and Windows servers for vulnerability impact analysis, end-of-life planning and TLS scoring; linked release versions and Jira references for Ops, product owners and QA.
- Built centralized ELK logging and managed fleet configuration with Puppet. Built an AWS migration target through console provisioning; the client cancelled before production cutover.

Key technologies: Linux, Jenkins, Puppet, Spacewalk, PRTG, ELK, AWS, Rocket.Chat

SOVO Technologies — Lead Technician → Software Engineer

Montréal, QC | November 2008 – December 2017

- Led and performed most redundancy work across HAProxy, Active Directory, speech-recognition servers and file services, supported by a second technician, for live-captioning production.
- Supported client requirements allowing at most three minutes of downtime per broadcast and eight seconds from speech to caption; distributed booth PCs across separate switches and provided dual internet links.
- Planned and executed two phased office relocations involving approximately 15–20 workstations. Developed production scheduling and speech-recognition evaluation software.

Key technologies: HAProxy, Active Directory, VMware vSphere, Linux, Windows Server, C++, Java, SQL

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure (ÉTS), Montréal | 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal | 2005
