Agfa HealthCare — Hiring Team

Re: Team Lead, DevOps (Remote, Waterloo ON)

Hello,

I am applying for the Team Lead, DevOps position. The role asks for a hands-on engineer who also coaches, and the Jenkins, Bitbucket and GitOps stack you describe is close to what I work in every day.

At Énergir I centralized Jenkins CI/CD for about 50 developers across 12 teams and more than 70 applications, with shared stages and mandatory SonarQube checks. I created the delivery roadmap as informal primary owner for the first three years, onboarded developers and DevOps engineers, and was their primary support contact. I have used Bitbucket for about eight years and Maven extensively. I have also used ArgoCD: at Desjardins I automated on-demand Artifactory test environments with Kubernetes and ArgoCD, and built a Python/FastAPI service that tested about 250 repositories every four hours and published results to Dynatrace.

On reducing manual intervention, I rebuilt Salesforce and Oracle delivery to remove manual steps and emergency-access accounts, cut MuleSoft releases from a 15-step checklist to a few Jenkins jobs, and replaced deployments from developers' laptops with service-account deployments.

To be direct about the gaps: my leadership has been informal, not a formal people-management role, and I have not had direct reports. I have used Gradle only occasionally, my Kubernetes experience is deploying applications to clusters other teams operate, and I have not run a GitOps transformation end to end. I have used Azure most; I have limited hands-on AWS and no GCP.

I am based in Ontario, bilingual in French and English, and available immediately. My resume is attached.

Thank you for your consideration.

Marc Berthelette
