Coalition, Inc. — Hiring Team

Re: Senior Site Reliability Engineer, Platform SRE (Remote, Ontario)

Hello,

I am applying for the Senior Site Reliability Engineer role on the Platform SRE team. Building paved roads that reduce toil for developers, with Python as the main tool, is the work I have done for the last five years.

At Énergir I centralized Jenkins CI/CD for about 50 developers across 12 teams and more than 70 applications, with shared stages and mandatory quality checks. I was the primary developer contact for delivery failures, and I separated application-code errors from platform-pipeline errors in build reporting, which cut false-positive failures and made troubleshooting ownership clear. I created the delivery roadmap as informal owner and onboarded new engineers, so mentoring and setting standards have been part of my work even without a formal title.

On reliability and observability, I built a Python/FastAPI service at Desjardins that tested about 250 Artifactory repositories every four hours and published results and dashboards to Dynatrace, reused as a regression check for an enterprise upgrade, and added Splunk alerts for changes made outside CI/CD. At Tink I supported a 24/7 production rotation, automated recovery of an Elasticsearch cluster after two minutes of probe-detected downtime, and automated patching of 600+ servers. I have also used GitHub Actions and ArgoCD on Kubernetes.

To be direct about the gaps, because AWS and Terraform are central to this role: my deepest cloud is Azure. My AWS experience is a single migration target environment I built by hand (EC2, S3, Route 53, VPC), which the client cancelled before cutover, so I have not operated a production AWS workload. My Terraform work was inside another team's workflows, not modules I authored. I have deployed to Kubernetes clusters that other teams operate. I have built metrics and alerting but have not defined formal SLOs or distributed tracing standards. I would expect to close the AWS gap quickly given the Azure foundation, but you should know it is a gap.

I am based in Ontario, bilingual in French and English, and available immediately. Could you confirm whether the role is a fixed-term contract or an employee position? My resume is attached.

Thank you for your consideration.
