Marc Berthelette

Senior SRE / Production Reliability Engineer

Smiths Falls, ON, Canada · Available for remote work · marc.berthelette@gmail.com
linkedin.com/in/marc-berthelette-3aba6917
Bilingual: French (native) · English (fluent) · Available immediately

Professional Summary

Senior DevOps engineer focused on production reliability, monitoring, and automation, with nearly 18 years across infrastructure and software development. Supported a 24/7 production rotation, automated recovery and certificate/version visibility across 600+ servers, and built Dynatrace and Splunk health monitoring for approximately 250 repositories. Brings Python automation, Linux, Azure, incident-response and root-cause experience, plus Salesforce delivery and sandbox validation at Énergir.

Technical Skills

Reliability & Operations: Production incident response, root cause analysis, on-call support, automated remediation, Linux
Monitoring & Observability: Dynatrace, Splunk, Elasticsearch, Logstash, Kibana, PRTG
Programming & Scripting: Python, FastAPI, Bash, Java, C++, SQL
Cloud & Infrastructure: Microsoft Azure, AWS (EC2, S3, Route 53, VPC), Terraform/Ansible workflows, Puppet
Containers & Delivery: Kubernetes application deployments, Docker, ArgoCD, Azure DevOps, GitHub Actions, Jenkins, JFrog Artifactory

Work Experience

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – September 2026

- Served as the primary developer contact for delivery failures; created the delivery roadmap as informal owner for the first three years and onboarded new engineers.
- Separated application-code errors from platform-pipeline errors in build reporting, reducing false-positive failures and making troubleshooting ownership clear.
- Centralized Jenkins continuous integration and delivery (CI/CD) for approximately 50 developers across 12 teams and 70+ applications, enforcing shared stages and mandatory SonarQube checks.
- Built Salesforce CLI delivery and sandbox validation of candidate merges; reduced recurring missed deployment windows to one miss since launch.
- Versioned ArcGIS map services and properties and delivered service-account deployments across dev, test, and production, replacing deployments from developers' laptops.

Key technologies: Azure, Jenkins, SonarQube, Azure DevOps, Python, Salesforce CLI, Oracle, ArcGIS

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026
Concurrent contract alongside the Énergir engagement.

- Built a Python/FastAPI health-monitoring service validating approximately 250 Artifactory remote repositories every four hours, with results and dashboards in Dynatrace.
- Designed configurable tests across seven package ecosystems; reused the validation harness as a regression check for the enterprise Artifactory upgrade.
- Provisioned on-demand Artifactory environments with Kubernetes and ArgoCD, giving administrators isolated environments for configuration and upgrade testing.
- Built Splunk alerts detecting configuration changes outside CI/CD and implemented artifact retention policies to improve auditability and control storage growth.

Key technologies: Python, FastAPI, Dynatrace, Splunk, JFrog Artifactory, Kubernetes, ArgoCD, GitHub Actions

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Automated Elasticsearch restart after two minutes of probe-detected downtime, with on-call escalation if still down at five minutes; supported a 24/7 production rotation.
- Automated OS patching and kernel reboots across 600+ servers, reducing maintenance to a monthly verification check with near-zero downtime.
- Built centralized ELK log aggregation and managed fleet configuration with Puppet and Spacewalk, supporting incident investigation and consistent system configuration.
- Created a software inventory platform exposing fleet-wide application versions, vulnerability exposure, end-of-life software, and TLS certificate assessments to product owners.
- Standardized Jenkins pipelines for 80+ applications and 20+ clients, helping 10–15 developers maintain consistent build and release processes.
- Built a client's AWS migration target environment over about six months (EC2, S3, Route 53, VPC, memcached on EC2, serverless relational database), provisioned by hand with no prior AWS experience; the client cancelled the migration before cutover.

Key technologies: Linux, AWS, Bash, Elasticsearch, Logstash, Kibana, PRTG, Puppet, Spacewalk, Jenkins

SOVO Technologies — Lead Technician → Software Engineer

Montréal, QC | November 2008 – December 2017

- Managed company IT infrastructure and a technician team; completed a server relocation without downtime and made core servers redundant to remove single points of failure.
- Developed production scheduling, voice-recognition evaluation, and multilingual dictionary software; served as the final quality gate before production releases.

Key technologies: Linux, Windows Server, VMware vSphere, Cisco networking, C++, Java, SQL, Active Directory

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure (ÉTS), Montréal, QC | 2005 – 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal, QC | 2002 – 2005
