Bilingual: French / English · Incorporated in Canada · Available immediately

Professional Summary

Senior engineer with nearly 18 years across infrastructure, development and operations. Initiated shared Jenkins pipelines for an environment of about 50 developers, 12 teams and 70+ applications, with mandatory quality gates, tested pipeline code, sample applications for integration testing, scheduled smoke tests, and recurring enablement sessions so teams adopted them. Built a Python/FastAPI validation workflow for about 250 Artifactory repositories at Desjardins. Technical direction without a formal lead title; Kubernetes and AWS experience is as a user.

Technical Skills

CI/CD & Build Systems: Jenkins (shared pipelines), GitHub Actions, Bitbucket, Azure DevOps, JFrog Artifactory, SonarQube, JaCoCo
Programming & Scripting: Python, FastAPI, Java, Bash, C++, SQL
Reliability & Observability: Dynatrace, Splunk, ELK, scheduled smoke tests, incident response
Cloud & Containers: Azure, AWS migration environment, Docker, Kubernetes application deployments, ArgoCD, Terraform/Ansible workflows (user of another team's modules)

Work Experience

Énergir — Senior DevOps Engineer (Contract)

Montréal, QC | September 2021 – September 2026
Five-year consulting engagement, renewed four times.

- Initiated shared Jenkins pipelines adopted by all teams already deploying through Jenkins, in an environment of about 50 developers, 12 teams and 70+ applications; achieved approximately 80–90% JaCoCo coverage of shared pipeline code with per-commit unit tests and built sample applications for integration testing.
- Enforced shared stages and mandatory SonarQube checks in the shared pipelines so developers could not simply skip them.
- Separated application-code errors from platform-pipeline errors in build reporting so teams could see whose fix a failure was.
- Implemented four-hourly Jenkins smoke tests with Teams alerts to detect external dependency failures, including firewall changes; clarified pipeline-versus-application failure ownership.
- Initiated and defined requirements for an availability dashboard covering Jenkins, Vault, Logstash and Nexus in development and production; a colleague implemented it.
- Ran recurring enablement sessions (about six per year) with each application team after pipeline delivery; onboarded new DevOps engineers and developers and was the primary developer contact when the delivery ecosystem broke.
- Established “build once, deploy many”; migrated approximately five Node.js applications to runtime configuration through team-reviewed pull requests so the same tested build could serve each environment.
- Replaced a 15-step MuleSoft checklist with version-based deployments of QA-tested artifacts, moving release preparation ahead of production windows and simplifying rollback.
- Built nightly Salesforce validation; escalated two weeks of failures to the project director, prompting fixes across 4–5 teams within 48 hours. The project deployed on schedule.

Key technologies: Jenkins, SonarQube, Azure, Python, JaCoCo, Salesforce CLI, Oracle, Node.js, MuleSoft, Dynatrace

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026
Concurrent with the Énergir engagement.

- Built a Python/FastAPI workflow that provisioned Artifactory, applied configuration from a selected Git reference, and tested uncached artifact retrieval across approximately 250 repositories.

- Deployed the suite through ArgoCD/GitOps for scheduled execution, publishing configuration-version and artifact-level results to Dynatrace to expose configuration and upstream connectivity failures.
- Made most validation logic tool-agnostic and the artifact test set configurable so platform administrators could add their own cases.
- Worked with Kubernetes, ArgoCD and GitHub Actions in a large financial-services environment.

Key technologies: Python, FastAPI, GitHub Actions, Artifactory, Kubernetes, ArgoCD, Dynatrace, Splunk

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Standardized Jenkins pipelines for 10–15 developers supporting 80+ applications and 20+ clients, integrating release details and Jira references into deployment reporting.
- Replaced reactive patching across 600+ servers with staged Spacewalk schedules, environment/role groups, A/B frontend and middleware batches, and dependency-aware reboots.
- Built fleet inventory across Unix and Windows servers to identify vulnerable applications and upcoming end-of-life upgrades; added TLS scoring and environment version tracking for Ops, product owners, and QA.
- Built an AWS migration target using console provisioning (EC2, S3, Route 53, VPC, caching and database services); the client cancelled before production cutover.

Key technologies: Linux, Jenkins, Puppet, Spacewalk, PRTG, ELK, AWS, Rocket.Chat

SOVO Technologies — Lead Technician → Software Engineer

Montréal, QC | November 2008 – December 2017

- Led and performed most redundancy work across HAProxy, authentication, speech-recognition servers and file services with a second technician; supported live-captioning requirements of three minutes maximum downtime per broadcast and eight-second caption latency.
- Owned IT planning and execution for two office relocations involving approximately 15–20 workstations, preparing networks and cabling and coordinating phased moves to minimize disruption.
- Developed production scheduling, speech-recognition evaluation, and multilingual dictionary software; served as the final quality gate before production releases.

Key technologies: HAProxy, Active Directory, VMware vSphere, Linux, Windows Server, C++, Java, SQL

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure (ÉTS), Montréal | 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal | 2005
