Re: DevOps Engineer (12-month contract, Remote/Atlanta GA)

Dear TechniPros Hiring Team,

I'm a Canadian citizen eligible for TN visa sponsorship, applying for the DevOps Engineer role. I bring 18 years of DevOps/Platform Engineering experience, most recently standardizing CI/CD delivery across nine runtimes for a dozen application teams at Énergir and building Terraform-driven infrastructure automation in regulated environments (energy, financial services).

I have direct, hands-on experience with Docker, Kubernetes, and CI/CD pipeline design (Jenkins, GitHub Actions, Azure DevOps), along with real security-integration practice — 8 years with SonarQube for code-quality/security scanning, roughly 5 years with JFrog Artifactory Xray (Snyk's closest equivalent) for artifact vulnerability scanning, plus secrets management, RBAC, and scope-gated AI-assisted development workflows I introduced at Énergir. I haven't used Snyk or Checkmarx by name, but the underlying practice — dependency and container vulnerability scanning integrated into the pipeline — is exactly what I've been doing with Xray.

Available to start on a 12-month W2 contract basis, TN-sponsored.

Best regards,

Marc Berthelette
