StackAdapt

Re: Senior DevOps Engineer (Kubernetes team)

Dear StackAdapt hiring team,

I am applying for the Senior DevOps Engineer role on the Kubernetes team. I bring 18 years of infrastructure and automation experience, including direct, hands-on AWS build work, deep Terraform practice, and Kubernetes automation in production environments — plus a consistent record of learning unfamiliar platforms cold under a delivery deadline.

At Tink, I built the compute, caching, and database layers of a client's full AWS migration target environment — EC2, S3, Route 53, self-managed memcached on EC2, and a serverless relational database — and contributed to the VPC and network design, with no prior AWS experience going in. I want to be precise about that engagement: the client cancelled the migration before cutover, and the resources were provisioned by hand in the AWS console rather than through Terraform or CloudFormation. It is real, hands-on build experience across AWS's core service surface, not production operations at scale — I'd rather state that plainly than have it surface as a surprise later.

Where I bring current production depth is Terraform and Kubernetes together. At Énergir, I led cloud modernization work migrating several mission-critical services to Microsoft Azure, implementing Terraform and Ansible practices that standardized environment provisioning and eliminated configuration drift across dev, staging, and production. At Desjardins, I automated the provisioning of on-demand Artifactory environments using Kubernetes and ArgoCD, giving administrators repeatable, isolated environments to safely test configuration changes and upgrades — infrastructure-as-code discipline applied to a real operational problem, not a lab exercise.

My Kubernetes experience sits on the provisioning and automation side rather than deep node-pool or control-plane administration at the scale this role implies, and my production cloud depth is Azure-first rather than AWS-first. What I offer instead is a demonstrated pattern — at Tink, Énergir, and Desjardins, each time given a narrower ask than what I ultimately delivered — and direct evidence that I can build production-grade AWS infrastructure from zero prior exposure when the work requires it.

I am based near Ottawa, fully bilingual in English and French, and available to work remotely.

Sincerely,

Marc Berthelette
