Nuclear Promise X (NPX)  
Re: Senior DevOps Developer (Coming Soon!)

Dear NPX Hiring Team,

I'm reaching out to express interest in the Senior DevOps Developer role you're building a candidate pool for, ahead of your anticipated hiring needs. I'm a Senior DevOps Engineer with nearly 20 years of experience building secure, production-grade cloud infrastructure for regulated enterprise environments -- most recently a 6-month engagement with Desjardins hardening the JFrog Artifactory platform, where I built Kubernetes/ArgoCD-driven environment automation, governance tooling, and Splunk-based alerting to enforce compliant, pipeline-only configuration changes. That security-first, audit-ready approach to infrastructure is directly relevant to deploying mission-critical systems into the nuclear industry.

At Energir, I architected enterprise CI/CD pipelines on Azure DevOps -- Azure being my deepest cloud platform, and I understand it's your preferred environment -- and standardized infrastructure provisioning with Terraform and Ansible, while driving root-cause-analysis and observability practices to reduce MTTR and improve system reliability. That combination of energy-sector regulated experience and Azure-first platform engineering maps closely to the infrastructure strategy work this role calls for.

I'm based remotely in Canada, incorporated, and fully bilingual (French/English). I'd welcome the opportunity to connect now so I'm top of mind as NPX's hiring needs develop.

Best regards,

Marc Berthelette
