

Marc Berthelette

Senior DevOps Engineer | Platform Engineering Consultant

Smiths Falls, ON, Canada · Remote · marc.berthelette@gmail.com

[linkedin.com/in/marc-berthelette-3aba6917](https://www.linkedin.com/in/marc-berthelette-3aba6917) · Bilingual: French (native) · English (fluent) · Incorporated in Canada · Available immediately

Professional Summary

Results-driven Senior DevOps Engineer and Platform Engineering Consultant with nearly 18 years of experience designing, automating, and optimizing enterprise-grade infrastructure across financial services, energy, and technology sectors. Deep expertise in Microsoft Azure, CI/CD pipeline architecture, Infrastructure as Code (IaC), and cloud modernization. Hands-on experience delivering Kubernetes, ArgoCD, GitHub Actions, and JFrog Artifactory engagements at scale. Proven track record recommending approach, driving platform engineering standards, enabling high-performing engineering teams, and delivering scoped outcomes with full autonomy. Incorporated in Canada — available for remote consulting engagements and senior employment opportunities worldwide.

Technical Skills

Category	Technologies
Cloud & DevOps Platforms	Microsoft Azure, Azure DevOps, GitHub Actions, Jenkins, JFrog Artifactory, Nexus, CloudFoundry
Infrastructure as Code	Terraform, Ansible, Puppet
Containers & Orchestration	Docker, Kubernetes, ArgoCD
Monitoring & Observability	Dynatrace, Splunk, ELK Stack (Elasticsearch, Logstash, Kibana), proactive alerting, incident response
Programming & Scripting	Python, FastAPI, Bash, C++, Java, SQL, NoSQL
Operating Systems & Web	Red Hat Linux, Ubuntu, Apache, Nginx
Project & Collaboration	Jira, Agile / Scrum, technical documentation, stakeholder enablement

Work Experience

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – Present

- Owned CI/CD pipeline delivery for 12 application teams covering 70+ applications across a wide technology footprint — Java, Node.js, Python, Spark, Oracle, CloudFoundry, MuleSoft, Salesforce, and Databricks — moving teams from manual deployments to automated pipelines with built-in quality gates.
- Led cloud modernization initiatives, migrating several (5–10) mission-critical services to Microsoft Azure with measurable improvements in scalability, resilience, and cost efficiency.
- Implemented Infrastructure as Code (IaC) practices using Terraform and Ansible, standardizing environment provisioning and eliminating configuration drift across dev, staging, and production.
- Orchestrated integration between Salesforce and enterprise Data Lake platforms, enabling secure, automated data pipelines supporting data-driven decision-making at scale; drove root cause analysis (RCA) on critical production incidents to reduce Mean Time to Recovery (MTTR) and increase system reliability.
- Delivered recurring team enablement sessions (~6/year) — meeting with each application team after pipeline delivery to demonstrate capabilities, drive CI/CD adoption, and transfer platform engineering standards.

Key technologies: Microsoft Azure, Azure DevOps, GitHub Actions, Terraform, Ansible, Java, Node.js, Python, Spark, Oracle, CloudFoundry, MuleSoft, Salesforce, Databricks, Data Lake, ServiceNow, IaC

Desjardins — Senior DevOps Engineer (*Contract*)

Montréal, QC (Remote) | October 2025 – March 2026

- Delivered a 6-month engagement hardening and operationalizing the enterprise JFrog Artifactory platform, designing and building a Python/FastAPI health-monitoring service that automatically tested the configuration of ~250 remote Artifactory repositories (spanning Docker, Helm, Node.js, Maven, Python, NuGet, and Debian) every 4 hours, publishing results to Dynatrace with technology-segmented dashboards for real-time repository health visibility.
- Automated provisioning of on-demand Artifactory instances using Kubernetes and ArgoCD, enabling system administrators to spin up fully configured corporate environments for safe testing of configuration changes and upgrades.
- Implemented artifact lifecycle policies to enforce retention standards and reduce storage overhead; built Splunk alerting to flag manual configuration changes made outside the Continuous Integration / Continuous Delivery (CI/CD) pipeline, improving auditability and compliance.

Key technologies: JFrog Artifactory, Python, FastAPI, Kubernetes, ArgoCD, GitHub Actions, Dynatrace, Splunk, Docker, Helm, Maven, NuGet, Debian

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Centralized Jenkins Pipeline as Code across a team of 10–15 developers maintaining 80+ applications for 20+ clients, standardizing pipeline steps regardless of underlying tech stack — improving deployment speed and reliability, and adding visibility through Jira integration.
- Automated OS-level patching across a fleet of 600+ servers, including automated kernel-update reboots, reducing the process to a monthly verification check with near-zero downtime.
- Built centralized log aggregation using the ELK Stack, enabling proactive detection of production anomalies and reducing incident response times.
- Designed and maintained a software inventory platform for product owners — surfacing CVE exposure, end-of-life software, and SSL/TLS certificate scoring across the server fleet.

Key technologies: Jenkins, ELK Stack (Elasticsearch, Logstash, Kibana), Bash, Linux, Jira, Puppet, PRTG, Spacewalk, CentOS, RockyOS, NetScaler, AWS, CVE/vulnerability tracking, SSL/TLS scoring

SOVO Technologies — Software Engineer

Montréal, QC | May 2017 – December 2018

- Designed and developed a voice recognition evaluation system and multi-language dictionary infrastructure, improving accuracy and performance across multiple locales and languages.

SOVO Technologies — Lead Technician

Montréal, QC | November 2008 – May 2017

- Oversaw all company IT infrastructure, including a zero-downtime server relocation and a redundant server architecture that eliminated single points of failure, while managing a team of technicians (scheduling, training, task delegation).
- Served as the final QA gate before any software release reached production, and designed the production scheduling software used for the full production department planning cycle.

Key technologies: C++, Java, SQL, Windows Server, Linux, Active Directory, VMware vSphere, Cisco routing, firewall/VPN, backup & recovery

Education

Bachelor of Automated Manufacturing Engineering (Industrial Data Processing)

École de Technologie Supérieure (ÉTS) — Montréal, QC

DCS in Computer Science Technology (Administrative Data Processing)

Cégep André-Laurendeau — Montréal, QC | 2005–2006
