- Diligent professional, able to assess and solve problems quickly and effectively with over 15 years of experience with the production environment.
- Result-driven professional, solving problems with solutions that suit long-term vision.
- Self-driven, motivated, resourceful, multi-skilled and highly adaptable to any situation or environment.

Work Experience

Énergir

Montréal, QC • 09/2021 - Now

DevOps Engineer

- Architected and implemented enterprise-grade CI/CD pipelines, automating end-to-end build, test, and deployment workflows, significantly accelerating release cycles while ensuring high availability and performance.
- Collaborated with cross-functional teams to integrate IaC methodologies, enhancing overall project delivery and fostering a proactive problem-solving environment.
- Spearheaded cloud modernization initiatives, successfully migrating and optimizing multiple mission-critical services to Microsoft Azure, improving scalability, resilience, and cost efficiency.
- Enhanced cross-functional collaboration, leading to the successful migration of many services to Microsoft Azure.
- Orchestrated the integration of Salesforce and enterprise Data Lake platforms, enabling secure data pipelines, enhanced interoperability, and data-driven decision-making.
- Performed advanced root cause analysis (RCA) on critical production incidents, implementing proactive monitoring, observability, and automated remediation strategies to increase system reliability and reduce downtime.
- Conducted technical evaluations and Proofs of Concept (PoCs) for emerging cloud and infrastructure technologies, influencing strategic technology roadmaps and vendor selection.
- Collaborated closely with Enterprise Architecture to design resilient, highly available, and cost-optimized infrastructure aligned with cloud-native and zero-trust principles.
- Authored technical documentation and delivered enablement workshops to drive cloud adoption, improve developer experience (DevEx), and promote platform engineering standards.

Skills

- Agile methodologies
- Bilingual
- CI / CD
- Service Cloud
- Collaboration
- Containerization
- Pensée critique
- Principes DevOps
- Infrastructure as Code
- Leadership
- Surveillance
- Operating Systems
- Problem Solving
- Solution deployment
- SQL and No-SQL DB
- Virtualization

Tools

- Ansible / Puppet
- Apache / Nginx
- Artifactory
- Azure DevOps
- Bash / Python
- C++ / Java
- CloudFoundry
- Docker
- ELK Stack
- Git
- Jenkins
- Jira
- Microsoft Azure
- Nexus
- RedHat / Ubuntu
- Terraform

Tink

Montréal, QC • 01/2018 - 08/2021

DevOps Engineer

- Apply DevOps principles to improve productivity of my team.
- Designed and implemented "Jenkins Pipeline as Code" to make daily work more efficient.
- Automated OS-level updates and patches, enhancing system security and reliability.
- Monitored automated build and continuous software integration process to drive build/release failure resolution.
- Collaborated with diverse teams to design and implement scalable solutions, significantly improving client satisfaction and project delivery timelines.
- Centralizing all application and infrastructure logs to better predict production incidents.

SOVO Technologies

Montréal, QC • 11/2008 - 12/2018

Software engineer

- Met with the production team to help improve the productivity by adding new features.
- Designed and developed a system used to evaluate and improve voice recognition software.
- Designed and developed the dictionary used for the multi-language environment.

Lead Technician

- Managed a team of technicians, including scheduling, training and assigning tasks.
- Oversaw the company's entire IT needs, including a successful relocation of the company's servers with minimal outage.
- Designed and programmed software used in planning all production department's schedules.

Education

Bachelor of Automated Manufacturing Engineering

École Technologie Supérieure

Montreal, QC

Specialty: Industrial data processing
