Kindred

Re: Senior Infrastructure Engineer

Dear Kindred hiring team,

I am applying for the Senior Infrastructure Engineer role. Directing infrastructure strategy, building internal developer tooling, and establishing best practices while mentoring engineers is close to the scope I already carry at Énergir — just applied to a fast-growing platform instead of a regulated utility.

At Énergir, I led cloud modernization migrating several mission-critical services to Microsoft Azure, implementing Terraform and Ansible practices that standardized environment provisioning and eliminated configuration drift across dev, staging, and production. I also drove CI/CD and platform-engineering adoption across 12 application teams outside any reporting line — running recurring enablement sessions that turned delivered tooling into actual usage, the same mentoring and best-practices work your posting describes.

At Desjardins, I built a Python/FastAPI service that tested the configuration of roughly 250 enterprise Artifactory repositories every four hours and published operational telemetry to Dynatrace, then automated on-demand environment provisioning with Kubernetes and ArgoCD — internal developer tooling built to a real audience, not a script for its own sake.

I want to be direct about AWS. At Tink, I built the compute, caching, and database layers of a client's full AWS migration target environment — EC2, S3, Route 53, self-managed memcached, a serverless relational database — with no prior AWS experience, and contributed to the VPC and network design. The client cancelled that migration before cutover, and the resources were provisioned by hand rather than through Terraform or CloudFormation. It's real, hands-on AWS build experience across the core service surface, not production architecture ownership at the ECS/EKS/Lambda scale this role implies — I'd rather say that plainly than have it surface as a surprise later. My current production cloud depth is Azure-first.

What I bring instead is a demonstrated pattern: given a narrower ask, at Tink, Énergir, and Desjardins alike, I've repeatedly delivered the structurally larger platform underneath it — and a proven ability to learn an unfamiliar cloud or platform cold, under a delivery deadline, and make it dependable.

I am based near Ottawa, fully bilingual in English and French, and available to work remotely.

Sincerely,

Marc Berthelette
