Professional Summary

Senior infrastructure and platform engineer with 18 years of experience directing infrastructure strategy, building internal developer tooling, and mentoring engineering teams outside any reporting line. Deep, current Microsoft Azure, Terraform, and Ansible practice standardizing production environments at Énergir; Kubernetes and ArgoCD automation for on-demand environment provisioning at Desjardins. Direct, hands-on AWS build experience from Tink — EC2, S3, Route 53, VPC, self-managed memcached, and a serverless relational database, built with no prior AWS experience. Learns unfamiliar platforms cold under a delivery deadline and consistently delivers the structurally larger infrastructure the problem actually needed.

Technical Skills

Infrastructure Strategy & Platform Engineering	Infrastructure direction, internal tooling, developer-productivity automation, cross-team enablement, mentoring
Infrastructure as Code	Terraform, Ansible, Puppet, environment standardization, configuration-drift elimination
Containers & Orchestration	Docker, Kubernetes, ArgoCD
Cloud Platforms	Microsoft Azure (production, 5–10 service migrations led), AWS (EC2, S3, Route 53, VPC — hands-on build, see Work Experience)
CI/CD	Azure DevOps, GitHub Actions, Jenkins Pipeline as Code, Git
Observability & Incident Response	Dynatrace, Splunk, ELK Stack, root-cause analysis, MTTR reduction, automated remediation
Programming & Automation	Python, FastAPI, Bash, Java, SQL, NoSQL

Work Experience

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – Present

- Led cloud modernization migrating several mission-critical services to Microsoft Azure, implementing Terraform and Ansible IaC practices that standardized environment provisioning and eliminated configuration drift across dev, staging, and production.
- Drove CI/CD and platform-engineering adoption across 12 application teams outside any reporting line, running recurring enablement sessions (~6/year) that turned delivered tooling into actual usage.
- Standardized CI/CD delivery across nine distinct runtimes for 12 application teams and 70+ applications, entering most ecosystems with no prior experience and reverse-engineering each before automating it.
- Drove root-cause analysis on critical production incidents and built proactive monitoring, dashboards, and automated remediation to reduce MTTR.

Key technologies: Microsoft Azure, Terraform, Ansible, Azure DevOps, GitHub Actions, Python, Dynatrace, Splunk, IaC

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026 — *concurrent engagement alongside the Énergir role*

- Automated provisioning of on-demand Artifactory environments using Kubernetes and ArgoCD, giving administrators repeatable, isolated environments for safely testing configuration changes and upgrades — internal developer tooling built for a real audience.
- Designed and built a Python/FastAPI service that tested the configuration of ~250 enterprise Artifactory repositories every 4 hours and published results to Dynatrace.
- Extended the engagement past its original scope by building the validation logic tool-agnostic and the test set configurable.

- Built Splunk alerting to detect manual configuration changes made outside the CI/CD pipeline.

Key technologies: Kubernetes, ArgoCD, Python, FastAPI, GitHub Actions, Dynatrace, Splunk, Docker, Helm

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Built the compute, caching, and database layers of a client's full AWS migration target environment — EC2, S3, Route 53, self-managed memcached on EC2, and a serverless relational database — and contributed to VPC/network and Route 53 design, with no prior AWS experience. Roughly 6 months of work; resources were provisioned by hand in the AWS console, not through Terraform or CloudFormation; the client cancelled the migration before cutover.
- Centralized Jenkins Pipeline as Code across a team of 10–15 developers maintaining 80+ applications for 20+ clients.
- Conceived and built, unprompted, a software inventory platform cataloguing every application and version across a 600+ server fleet — surfacing CVE exposure, end-of-life software, and SSL/TLS certificate scoring to product owners who previously had no such visibility.
- Managed fleet configuration as code via Puppet and Spacewalk; built centralized log aggregation using the ELK Stack.

Key technologies: AWS (EC2, S3, Route 53, VPC), Jenkins, Puppet, Spacewalk, ELK Stack, Bash

SOVO Technologies — Lead Technician to Software Engineer

Montréal, QC | November 2008 – December 2017

- Owned company IT infrastructure, delivered a zero-downtime server relocation, and introduced redundancy that eliminated single points of failure.
- Wrote production software for approximately seven years before the title formalized it.

Key technologies: C++, Java, SQL, Windows Server, VMware vSphere, Active Directory

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure, Montréal, QC | 2005 – 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal, QC | 2002 – 2005
