Professional Summary

Senior platform and infrastructure engineer with 18 years of experience running enterprise application platforms under formal governance. Automated provisioning of on-demand container environments with Kubernetes and ArgoCD at Desjardins, built certificate and artifact lifecycle controls to enforce retention and detect configuration drift outside approved pipelines, and operated production change through ServiceNow across 12 application teams at Énergir. Deep Microsoft Azure, Terraform, and Ansible infrastructure-as-code practice. Learns unfamiliar platforms cold under a delivery deadline — Salesforce, MuleSoft, Databricks, Oracle, JFrog Artifactory, and Kubernetes/ArgoCD were each entered with no prior experience and automated within scope.

Technical Skills

Platform & Application Delivery	Cloud migration and modernization, container platform deployment (Kubernetes, ArgoCD, Docker), CI/CD standardization
Certificate & Access Governance	Artifact/certificate lifecycle policy enforcement, access-control review, audit-driven configuration-drift detection
Change & Release Management	ServiceNow change management, formal release governance, cross-team enablement
Infrastructure as Code	Terraform, Ansible, Puppet, environment standardization
Cloud Platforms	Microsoft Azure (production, 5–10 service migrations led), AWS (EC2, S3, Route 53, VPC — hands-on build, see Work Experience)
CI/CD & Artifact Management	Azure DevOps, GitHub Actions, Jenkins Pipeline as Code, JFrog Artifactory, Nexus
Observability	Dynatrace, Splunk, ELK Stack, proactive monitoring and alerting, incident response
Programming & Systems	Python, FastAPI, Bash, Java, C++, SQL, NoSQL, Red Hat Linux, Ubuntu

Work Experience

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – Present

- Led cloud modernization migrating several mission-critical services to Microsoft Azure, implementing Terraform and Ansible IaC practices that standardized environment provisioning and eliminated configuration drift.
- Standardized CI/CD delivery across nine distinct runtimes for 12 application teams and 70+ applications, entering most ecosystems with no prior experience and reverse-engineering each before automating it.
- Ran production change and release governance through ServiceNow across all 12 teams, drove root-cause analysis on critical incidents, and built proactive monitoring, dashboards, and automated remediation.
- Drove CI/CD and platform-engineering adoption across 12 teams outside any reporting line through recurring enablement sessions.

Key technologies: Microsoft Azure, Terraform, Ansible, ServiceNow, Azure DevOps, GitHub Actions, Python, Dynatrace, Splunk

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026 — concurrent engagement alongside the Énergir role

- Automated provisioning of on-demand Artifactory environments using Kubernetes and ArgoCD, giving administrators repeatable, isolated environments for safely testing configuration changes and upgrades.
- Implemented artifact lifecycle policies to enforce retention standards and reduce storage overhead; built Splunk alerting to detect manual configuration changes made outside the CI/CD pipeline, improving auditability and compliance.

- Designed and built a Python/FastAPI service that tested the configuration of ~250 enterprise Artifactory repositories every 4 hours and published results to Dynatrace.
- Extended the engagement past its original scope by building the validation logic tool-agnostic and the test set configurable — the same harness then de-risked the enterprise Artifactory version upgrade.

Key technologies: Kubernetes, ArgoCD, JFrog Artifactory, Python, FastAPI, GitHub Actions, Dynatrace, Splunk, Docker, Helm

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Built the compute, caching, and database layers of a client's full AWS migration target environment — EC2, S3, Route 53, self-managed memcached, serverless relational database — with no prior AWS experience; the client cancelled the migration before cutover, resources provisioned by hand rather than via Terraform/CloudFormation.
- Managed fleet configuration as code via Puppet and Spacewalk across 600+ servers; centralized Jenkins Pipeline as Code for 80+ applications across 20+ clients.
- Conceived and built, unprompted, a software inventory platform cataloguing every application and version across a 600+ server fleet — surfacing CVE exposure, end-of-life software, and SSL/TLS certificate scoring to product owners who previously had no such visibility.

Key technologies: AWS (EC2, S3, Route 53, VPC), Jenkins, Puppet, Spacewalk, ELK Stack, SSL/TLS certificate scoring

SOVO Technologies — Lead Technician to Software Engineer

Montréal, QC | November 2008 – December 2017

- Owned company IT infrastructure, delivered a zero-downtime server relocation, and introduced redundancy that eliminated single points of failure.
- Wrote production software for approximately seven years before the title formalized it, including work in C++ and Java alongside infrastructure duties.

Key technologies: C++, Java, SQL, Windows Server, VMware vSphere, Active Directory, firewall/VPN administration

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure, Montréal, QC | 2005 – 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal, QC | 2002 – 2005
