

Dear BDO Canada Hiring Team,

I am applying for the Senior Platform Engineer - Terraform, Azure role. I have spent the past several years building Azure infrastructure and delivery platforms that application teams can reliably use, then working across those teams to make the standards stick. I am based near Ottawa, fully bilingual in French and English, and available immediately.

At Energir, I standardized CI/CD across 12 application teams, nine runtimes, and more than 70 applications while helping migrate 5-10 mission-critical services to Microsoft Azure. I used Terraform and Ansible to standardize provisioning across environments and reduce configuration drift, and I partnered with Enterprise Architecture on resilient, cost-conscious infrastructure aligned with cloud-native and zero-trust principles. Just as importantly, I led adoption outside any reporting line through recurring enablement sessions, turning shared tooling into working practice across the application portfolio.

My strongest work starts when the assignment is narrower than the real problem. When asked to replace legacy Salesforce ANT deployment scripts, I moved the delivery process to the official Salesforce CLI, then proposed and built a validation pipeline that deployed every candidate merge to a dedicated sandbox and ran the full test suite. The team went from frequently missing deployment windows to a single miss since launch. I chose the larger solution because it was the right answer for the teams using the platform, not merely the cheapest implementation of the request.

I would bring that same combination of Azure infrastructure automation, platform judgment, and cross-team enablement to BDO's enterprise landing-zone work. My background also includes regulated financial-services delivery at Desjardins, where I built an extensible validation service for approximately 250 Artifactory repositories and automated test-environment provisioning with Kubernetes and ArgoCD.

Thank you for your consideration. I would welcome a conversation about the platform's current maturity, the expected hybrid cadence in Ottawa, and how this role helps application teams adopt BDO's Azure standards.

Sincerely,

Marc Berthelette
