

Dear Ciklum Hiring Team,

I am applying for the Senior DevOps Engineer role. My recent work has centered on Microsoft Azure, Terraform, CI/CD automation, and the operational ownership required to turn infrastructure standards into platforms that application teams can depend on. I am based in Ontario, fully bilingual in French and English, and available immediately for remote work in Canada.

At Energir, I standardized CI/CD across 12 application teams, nine runtimes, and more than 70 applications while helping migrate 5-10 mission-critical services to Microsoft Azure. I used Terraform and Ansible to standardize provisioning across environments and reduce configuration drift, partnered with Enterprise Architecture on resilient cloud infrastructure, and drove adoption through recurring enablement sessions outside any reporting line.

My strongest work starts when the requested task is narrower than the real problem. When asked to replace legacy Salesforce ANT deployment scripts, I migrated delivery to the official Salesforce CLI, then proposed and built a validation pipeline that deployed every candidate merge into a dedicated sandbox and ran the full test suite. The team went from frequently missing deployment windows to a single miss since launch. I chose the larger solution because it was the right answer for the teams relying on the platform, not merely the cheapest implementation of the request.

I also bring production reliability and financial-services experience. At Desjardins, I built a Python/FastAPI service that tested approximately 250 enterprise Artifactory repositories every four hours and published their health to Dynatrace. I made its validation engine configurable and tool-agnostic, and it became the regression-safety net for the platform's version upgrade. I also automated test-environment provisioning with Kubernetes and ArgoCD.

I would welcome a conversation about Ciklum's Azure platform, its hybrid-connectivity requirements, and the Canadian engagement structure for this role. Thank you for your consideration.

Sincerely,

Marc Berthelette
