

Dear CMHC Hiring Team,

I am applying for the Senior Specialist, Software Engineering (CI/CD & Automation Engineering) role. Building pipeline templates and paved roads that other teams actually adopt is the work I have done for the past several years, and I would like to do it for an organization with CMHC's mandate. I am fully bilingual (French native, English fluent) and based in the Ottawa region.

At Energir, I standardized CI/CD across 12 application teams, nine runtimes, and more than 70 applications, using Azure DevOps and GitHub Actions with built-in quality gates. I entered most of those ecosystems with no prior experience and reverse-engineered each one before automating it. The Salesforce team was asked only to replace legacy ANT deployment scripts. I replaced them with the official Salesforce CLI, then proposed and built a validation pipeline that deploys every candidate merge into a dedicated sandbox and runs the full test suite. The team went from a recurring problem of missed deployment windows to a single missed window since launch. I chose that over the cheaper port because it was the better answer for the team.

Templates only matter if teams use them. I drove adoption across those 12 teams outside any reporting line, running recurring enablement sessions with each team after delivery, so the tooling became daily practice instead of shelfware. I also separated application-code failures from platform failures in pipeline reporting, so teams could tell at a glance whether a failure was theirs to fix.

On the infrastructure side, I use Terraform and Ansible to standardize environment provisioning on Azure, and I script in Python, Bash, and PowerShell-adjacent tooling. At Desjardins, I built a Python/FastAPI service that tested roughly 250 enterprise Artifactory repositories every four hours and published health signals to Dynatrace, then made it tool-agnostic so administrators could add their own tests.

I understand the role requires Reliability Status. I am happy to complete the screening process and can start immediately. Thank you for your consideration.

Sincerely,

Marc Berthelette
