

Dear Coinbase Hiring Team,

I am applying for the Senior Software Engineer, Core Reliability role because it combines software engineering with the reliability and delivery problems I have spent my career solving. I bring 18 years across production software, systems, and DevOps engineering, including approximately seven years writing application software followed by extensive work building CI/CD platforms, observability, automated remediation, and dependable infrastructure for enterprise application estates.

At Energir, I standardized CI/CD across 12 teams, nine runtimes, and more than 70 applications. I led modernization of mission-critical services, built monitoring and automated remediation, and made pipeline failures self-diagnosing by distinguishing application-code errors from platform failures. This reduced false escalations and gave development teams clearer ownership of recovery.

At Desjardins, I designed and built a Python/FastAPI service that validated approximately 250 enterprise JFrog repositories every four hours and published continuous health signals to Dynatrace. I made its validation engine tool-agnostic and configurable, allowing administrators to extend it and turning it into the regression-safety net for a major platform upgrade. Earlier at Tink, I centralized Jenkins delivery for more than 80 applications and used root-cause analysis and self-healing automation to substantially reduce on-call interruptions across a 600-server environment.

My production programming background includes C++, Java, Python, SQL, and systems integration rather than Ruby or Go. I would not overstate that gap. What I offer Coinbase is a strong software-engineering foundation combined with years of direct experience improving deployment systems, diagnosing distributed failures, reducing operational toil, and creating reusable reliability mechanisms for critical services.

I would welcome the opportunity to help Coinbase strengthen the configuration, deployment, and reliability foundations behind its Tier-0 systems.

Sincerely,

Marc Berthelette
