

Dear Conga Hiring Team,

I am applying for the Sr. Software Engineer, DevOps role because its focus on continuous delivery, cloud infrastructure, and reliable SaaS operations closely matches the platform work I have led throughout my career. I bring 18 years across software, systems, and DevOps engineering, with deep Microsoft Azure, Terraform, CI/CD, observability, and production-reliability experience.

At Energir, I standardized CI/CD across 12 application teams, nine runtimes, and more than 70 applications. I entered many of those ecosystems without prior experience, reverse-engineered their delivery constraints, and replaced fragile manual processes with reusable pipelines and quality gates. For Salesforce, I went beyond replacing legacy ANT scripts: I built a validation pipeline that deploys candidate merges into a dedicated sandbox and runs the full test suite, reducing missed deployment windows from a recurring problem to one since launch.

At Desjardins, I was initially asked to verify the configuration of roughly 250 enterprise JFrog repositories. I delivered a Python/FastAPI service that tested them every four hours and published health signals to Dynatrace, then made the validation engine tool-agnostic and configurable. The same platform became the regression-safety net for a major JFrog upgrade. That pattern—solving the immediate requirement while building the more durable delivery capability—is the judgment I would bring to Conga.

My Azure work is deeper and more recent than my AWS experience. At Tink, I spent roughly six months building the compute, caching, database, VPC, and Route 53 layers of an AWS migration target; the client cancelled before production cutover, and the resources were provisioned manually rather than through IaC. Alongside that honest foundation, I bring substantial Terraform, Docker, Kubernetes delivery, Jenkins, GitHub Actions, and Azure DevOps experience. I would welcome the opportunity to help Conga strengthen continuous delivery and cloud operations across its revenue-lifecycle platform.

Sincerely,

Marc Berthelette
