

Dear Dynatrace Hiring Team,

I am applying for the Senior Technology Consultant role. My background combines observability, production reliability, technical consulting, and the ability to help teams adopt unfamiliar platforms. I have used Dynatrace in a large financial-services environment, alongside broader experience with Splunk and the ELK Stack, and I am fully bilingual in French and English.

At Desjardins, I built a Python/FastAPI service that tested the configuration of approximately 250 enterprise Artifactory repositories every four hours and published their health signals to Dynatrace. The original assignment was limited to configuration verification, but I made the validation engine tool-agnostic and its test set configurable so administrators could extend it themselves. The same system became the regression-safety net for the enterprise Artifactory upgrade. I chose that larger solution because it was the right answer for the platform team, not merely the cheapest implementation of the initial request.

At Energir, I standardized CI/CD across 12 application teams, nine runtimes, and more than 70 applications. I also led root-cause analysis on critical incidents and implemented proactive monitoring, dashboards, and automated remediation. Delivery was only part of the work: I ran recurring enablement sessions with each team after introducing new pipelines, turning technical standards into practices people could understand and use.

Earlier at Tink, I implemented centralized ELK logging across a fleet of more than 600 servers and automated the recovery of an unstable Elasticsearch cluster, eliminating the need for a human response to a known failure mode. That operational foundation helps me connect observability tooling to the outcomes customers actually need: clearer signals, faster diagnosis, and less repetitive work.

I would welcome a conversation about the balance of implementation, managed services, training, and travel in this position. Thank you for your consideration.

Sincerely,

Marc Berthelette
