

Dear Intact Hiring Team,

I am applying for the DevOps Specialist - Shared Services role because its focus on helping product squads improve through tooling, automation, training, and technical guidance closely matches the work I have led throughout my career. I bring 18 years across software, infrastructure, and DevOps engineering, including recent platform work in financial services, and I am fully bilingual in French and English.

At Energir, I standardized CI/CD across 12 application teams, nine runtimes, and more than 70 applications. The work was not simply to build pipelines: I reviewed each team's delivery constraints, created reusable tooling and quality gates, made failures easier to diagnose, and ran recurring enablement sessions so teams could adopt the platform successfully. That experience maps directly to Intact's modernization squad and its mandate to advise, train, mentor, and give product teams approachable paths to better engineering practices.

At Desjardins, I was initially asked to verify the configuration of roughly 250 enterprise JFrog repositories. I delivered a Python/FastAPI monitoring service that exercised them every four hours and published health signals to Dynatrace, but I also made its validation logic tool-agnostic and its tests configurable. The broader design enabled administrator self-service and became the regression-safety net for a major platform upgrade. It reflects how I approach modernization: solve the immediate need, look under the hood, and build the durable capability that will serve the organization afterward.

My background includes Jenkins, GitHub Actions, Azure DevOps, Dynatrace, Grafana-adjacent observability work, ELK, Kubernetes, and varied application platforms. While Java/Spring Boot on OpenShift is not my deepest stack, I have repeatedly learned unfamiliar environments under delivery deadlines and standardized delivery across Java and eight other runtimes. I would welcome the opportunity to help Intact's product squads challenge the status quo and turn modern engineering practices into tools teams can actually use.

Sincerely,

Marc Berthelette
