

Dear Koonkie Hiring Team,

I am applying for the DevOps Engineer role. You are looking for someone to own the infrastructure behind a bioinformatics platform and mentor developers along the way. I have spent 18 years in software, systems, and DevOps engineering, and the last several on Microsoft Azure, Terraform, and CI/CD, which is where your stack sits.

The pattern in my work is that I take a narrow request and deliver something structurally bigger, because that is usually what is best for the client, not the cheapest option. At Desjardins I was asked to verify the configuration of roughly 250 enterprise JFrog Artifactory repositories. I built a Python/FastAPI service that tested them every four hours and published health signals to Dynatrace. I then made the validation engine tool-agnostic and configurable, so administrators could add their own tests. The same harness became the regression-safety net for a major JFrog upgrade.

At Energir, I standardized CI/CD across 12 application teams, nine runtimes, and more than 70 applications with Azure DevOps and GitHub Actions. I entered most of those ecosystems with no prior experience and reverse-engineered each one before automating it. For Salesforce, I replaced legacy ANT scripts with the official CLI and built a sandbox validation pipeline. The team went from a recurring problem of missed deployment windows to one missed window since launch. I also ran recurring enablement sessions with every team, so the pipelines got used instead of sitting on a shelf. That is the mentoring side of this role, and I enjoy it.

I use Terraform and Ansible to standardize environments on Azure, and I write Python and Bash daily. I have not worked with Bicep as my primary IaC tool, but I have led Azure migrations and built environments with Terraform, and I pick up unfamiliar tooling quickly. In earlier roles I also built log aggregation, monitoring, and self-healing remediation, which matters when a small team has to keep a data platform running.

I am bilingual (French native, English fluent), incorporated in Canada, and available immediately. I would welcome a conversation about how I can help Koonkie.

Sincerely,

Marc Berthelette
