

Dear NTT DATA Hiring Team,

I am applying for the DevOps CI/CD Engineer / Kentico role because its focus on delivery automation, cloud infrastructure, and reliable application releases aligns closely with the enterprise platform work I have led throughout my career. I bring 18 years across software, systems, and DevOps engineering, including standardizing CI/CD across large application estates, automating infrastructure and operations, improving observability, and helping development teams adopt reliable delivery practices.

At Energir, I standardized CI/CD across 12 teams, nine runtimes, and more than 70 applications. I led Azure modernization using Terraform and Ansible, introduced reusable pipelines with built-in quality gates, and made failures easier to diagnose by separating application errors from platform issues. I also ran recurring enablement sessions so development teams could use and maintain those delivery patterns independently.

At Desjardins, I built a Python/FastAPI service that validated approximately 250 enterprise JFrog repositories every four hours and published continuous health signals to Dynatrace. Its configurable, tool-agnostic design became the regression-safety net for a major platform upgrade. Earlier at Tink, I centralized Jenkins Pipeline as Code for more than 80 applications across 20 clients and automated operations over a 600-server Linux fleet.

My strongest recent cloud experience is in Microsoft Azure. At Tink, I also built an AWS migration target using EC2, S3, Route 53, VPC, caching, and a serverless relational database, although the client cancelled the initiative before production cutover and the infrastructure was provisioned manually. I do not claim direct Kentico expertise, and my .NET ecosystem experience is not as deep as my Java, Python, and infrastructure background. I would bring an honest AWS foundation, extensive CI/CD leadership, and a proven ability to learn unfamiliar application platforms under delivery deadlines.

I would welcome the opportunity to help NTT DATA improve the safety, repeatability, and visibility of its client's Kentico delivery platform.

Sincerely,

Marc Berthelette
