

Dear NTT DATA Hiring Team,

I am applying for the Azure Architect / DevOps Engineer role. My recent work combines Microsoft Azure modernization, infrastructure automation, CI/CD platform engineering, and integration delivery across complex enterprise environments. I am based in Ontario, fully bilingual in French and English, and available immediately for remote work in Canada.

At Energir, I helped migrate 5-10 mission-critical services to Microsoft Azure and partnered with Enterprise Architecture on resilient, cost-conscious infrastructure aligned with cloud-native and zero-trust principles. I standardized CI/CD across 12 application teams, nine runtimes, and more than 70 applications using Azure DevOps and GitHub Actions, while using Terraform and Ansible to standardize provisioning and reduce configuration drift. That portfolio included MuleSoft, Data Lake, Salesforce, Oracle, Java, Python, and Databricks delivery.

My strongest work starts when the requested task is narrower than the real problem. When asked to replace legacy Salesforce ANT deployment scripts, I migrated delivery to the official Salesforce CLI, then proposed and built a validation pipeline that deployed every candidate merge into a dedicated sandbox and ran the complete test suite. The team went from frequently missing deployment windows to a single miss since launch. I chose the larger solution because it was the right answer for the teams relying on the platform, not merely the cheapest implementation of the request.

I also bring recent financial-services experience from Desjardins, where I built a Python/FastAPI service that validated approximately 250 enterprise Artifactory repositories every four hours and published their health to Dynatrace. I extended it into a configurable, tool-agnostic regression harness and automated test-environment provisioning with Kubernetes and ArgoCD.

I would welcome the opportunity to discuss how my Azure delivery, enterprise integration, and DevOps enablement experience could support NTT DATA's clients and teams. Thank you for your consideration.

Sincerely,

Marc Berthelette
